Together, beyond animal health

FILAVAC RHD K C+V Vaccine (0.5 ml x 10D)

September 20th, 2022

Dear valued partners,

Ceva® Animal Health is committed to providing high-quality products that provide a simplified solution to both veterinary teams and pet owners.

As you may be aware, the Canadian Food Inspection Agency (CFIA) has reported multiple outbreaks of the Rabbit Hemorrhagic Disease Virus-2 (RHDV2) in Ontario, Québec, Alberta, and British Columbia. This newly emerging disease is highly contagious, fatal, and without treatment. The only prevention is vaccination with a vaccine that has been previously unlicensed for use in Canada.

We recognize the impact of this infectious disease on veterinary teams and pet owners. Given the urgent need for this vaccine, Ceva® Animal Health worked quickly to provide the Canadian market with this important vaccine, Filavac VHD K C+V.

Filavac VHD K C+V 0.5ml x 10D is now available to purchase through your current distribution partner.

Product Name	Format	CDMV	VP	WDDC	AVP
Filavac VHD K C+V	0.5 ml x 10D	128128	3910390	141053	1033680

Filavac VHD K C+V provides active immunization for rabbits from 10 weeks of age to reduce mortality caused by classical (RHDV1) and type 2 (RHDV2) virus strains.

The formulation, dosage and administration, and usage remain the same, and will include a separate Canadian package insert which is bilingual and includes the Canadian-specific withdrawal period.

A 21 day withdrawal period is authorized in Canada and stated on the bilingual package insert – the Canadian withdrawal period must be followed when using Filavac VHD K C+V. It is important that this is communicated to each customer and user of Filavac VHD K C+V.

We appreciate your understanding as we work quickly to bring this vaccine to Canada and simplify the process to acquire this important vaccine.

Please do not hesitate to contact your Ceva® Customer Service Representative with any questions.

Thank you,
Ceva Animal Health
