# 50+ Sensitive Workplace Stress Statistics 2024

HRToday | HRStacks | Manjuri Dutta | June 13, 2024

Stress is one of most important aspect of workplace that needs significant amount of focus from the management to create a healthy and happy work culture. We have curated some of the important workplace stress statistics in this article that might help.

Below are some of the **important workplace stress statistics** to give you idea about stress can impact employees as well as the organization.

Workplace stress is a real thing and employers are well aware of the fact how engaging and efficient a stressfree workforce can be.

When you take steps to reduce stress, it shows your employees that you really care about their mental health and overall well-being.

But here's the thing—handling workplace stress isn't just about cutting down on work. It's also about building a supportive work culture where everyone feels comfortable talking about what's bothering them.

Work-related stress can be caused by poor work organization (the way we design jobs and work systems, and the way we manage them), by poor work design (for example, lack of control over work processes), poor management, unsatisfactory working conditions and lack of support from colleagues and supervisors.

*World Health Organization*

In this article, we'll have a look at some of the important workplace stress statistics and the measures that we can take to mitigate stress.

- Important Workplace Stress Statistics

## Sources of Workplace Stress

Understanding what's really causing stress is key to taking effective proactive steps. If you don't get it right, employees might feel like they're not getting the support they need. On the other hand, too much interference can feel like someone's always looking over your shoulder.

**One biggie causing workplace stress is excessive workload (American Institute of Stress).**

Lots of employees say having too much to do is a major stress factor. In fact, 46% of them point to workload as their main stressor at work.

A combination of tight deadlines and understaffing are the primary factors that lead to heavy workloads for employees. 40% of employees feel their workloads could be more manageable due to staffing shortages, and 30% cite unrealistic deadlines.

### Lack of support from management can increase workplace stress levels (APA)

Supportive management can be very effective in managing workplace stress. Employees who feel unsupported by their managers report higher stress levels and lower job satisfaction.

A survey of 1,500 employees showed that those who felt unsupported by their managers rated their stress levels at an **average of 7.3 out of 10**. On the flip side, employees who felt supported by management rated their **stress levels at just 4.5**.

### Poor work-life balance contributes to employee stress (Gallup)

Work-life balance is another significant factor in workplace stress. 60% of employees say their job demands interfere with their personal lives, leading to increased stress levels. It also contributes to a high degree of absenteeism in an organization.

## Workplace Stress, Engagement, and Turnover

A high level of workplace stress can significantly impact the employee retention rate within an organization.

### A higher stress levels can decrease employee engagement by up to 50% (SHRM)

Employees experiencing high stress are less likely to be engaged and productive as compared to a stress free work environment

A study found that 70% of highly stressed employees reported low engagement levels, compared to just 20% of employees with low-stress levels.

### 45% of employees say that workplace stress has made them want to seek another job (CareerBuilder)

Employees who feel overwhelmed by stress are more likely to look for opportunities elsewhere. Stress is one of the most frequent causes of high attrition rates for organisations.

Close to half of the workforce in a stressful environment are regularly looking for opportunities outside.

# Stress Management Programs

When you look for stress management programs, there are two primary approaches to managing workplace stress: the first one is organizational changes, and the second is individual support programs.

This section covers the current state of workplace stress management programs.

Most organizations get how important a stress-free work culture is. In fact, **3 out of 5 companies have a stress management program** (Willis Towers Watson).

Right now, many top companies realize the value of handling workplace stress and have set up programs to help their employees manage it.

## Mindfulness and wellness programs are the most common forms of stress management solutions.

45% of companies use mindfulness programs to help employees manage stress. Other popular methods include wellness initiatives (40%), flexible work arrangements (35%), and employee assistance programs (30%).

| | |
|---|---|
| Mindfulness programs | 45% |
| Wellness initiatives | 40% |
| Flexible work arrangements | 35% |
| Employee assistance programs | 30% |

### Employee Recognition and Stress Reduction

Recognizing employees' efforts can also help reduce stress and improve productivity. Positive feedback can have a remarkable impact on the psyche of employees, making them feel better and encouraging more engagement within the organization.

### 4 in 5 employees feel less stressed when their efforts are recognized (Workhuman)

Regular recognition programs can significantly reduce stress levels. Employees who feel acknowledged and appreciated report lower stress levels.

## Important Workplace Stress Statistics

When managers understand the importance of workplace stress, they can better prepare for it and make a healthy work environment.
