A key partnership to leverage impact

VOSH/International is thrilled to announce a partnership with Charity Vision International to increase our impact supporting international optometric education and humanitarian action worldwide by strengthening our donation of used ophthalmic equipment program.

For many years, VOSH/International collected and distributed used ophthalmic equipment donated by US optometrists to affiliated schools of optometry (SVOSH chapters), other academic institutions, and public clinics and hospitals in low and middle-income countries, enabling them to offer a rewarding learning experience and serve thousands of patients locally. The Technology Transfer Program (TTP) under the leadership of Dr. David Stacy successfully supported schools of optometry in Nicaragua, Haiti, Mexico, the Dominican Republic, Panama, and Ghana, among others. The tireless work of our volunteers set the basis for the next stage.

Charity Vision International is a respected and admired US-based non-profit organization dedicated to eye health. With a mission and values closely aligned to ours, they continue restoring sight and expanding access to eye health care worldwide.

"This landmark agreement represents a significant milestone in our shared mission to bring quality eye health and vision care to underserved populations worldwide", said Dr Hector Santiago, VOSH/International President.

With an increasing global presence, VOSH/International's partnership with Charity Vision International will complement strengths and leverage impact, benefiting more optometrists, optometry students, and their patients worldwide.

CharityVision

Doug Jackson, CEO of Charity Vision, said "*I am often asked, 'how can I help?" My answer is simply that technology changes lives—and you can too. Donate your unused or used optometric equipment and help fellow optometrists abroad restore sight and transform futures. It is one of the most impactful ways to get involved; help other optometrists access the tools they need".*

We look forward to a strong and fruitful collaboration. Consider donating ophthalmic equipment or encourage others to donate to this important cause.
