jjacobson@charlesarmstrong.org

Items can be picked up during conferences this week.

50% Off of One Week of Kidizens Young Mayors LEGO Camp!

50% off of One Week of Young Mayors LEGO Camp

Would your child like to build and be the Mayor of a LEGO city? Join us for our fun and highly engaging Kidizens Summer Camps! Kidizens inspires kids (gr. K-3 and 3-6) to become good citizens and future leaders, one LEGO brick at a time. Our innovative program includes intensive action and excitement-packed sessions, where children create their own small civilization built with LEGOs and serve as co-mayors and council members. In a fast-paced dynamic environment, campers develop leadership and interpersonal skills while dealing with natural disasters, resident/policy problems, budget crises and more.

Visit www.thekidizens.com

Restrictions and Notes:

- * Good for Summer Camp 2018
- * Los Altos location only.
- * Expires August 2018.

Cost:

\$25

MVCode Summer Camp

Gift Certificate good for \$200 towards total camp cost.

At MVCode we prepare kids for the future. Our coding camps and classes provide a fun, engaging learning environment where students are taught to use computational logic, creativity, and collaboration to build their own video games, apps, websites, and robots. Our industry-leading camper/counselor ratio, innovative self-paced curriculum, and friendly professional staff make us your premier coding camp in the Bay Area.

Restrictions and notes:

- * Serves children between 7 - 14 years of age.
- * San Mateo location.

Cost:

\$100

Interactive Metronome Assessment

Kathy Pollard is one of the Bay Area's expert providers of Interactive Metronome Therapy, a game-like treatment tool used to help individuals, both young and old, with

conditions that affect cognitive and motor functioning or those seeking to improve mental or physical performance. Kathy Pollard visits her patient's at home, making treatment easy and convenient. The program itself provides patients with immediate feedback so they recognize their progress in real-time as it occurs. This increases the patient's motivation to improve. Interactive Metronome is used to improve: Attention, Coordination, Language processing, Reading and math fluency, Control of impulsivity/aggression.

Interactive Metronome (IM) was developed in the early 1990s and immediately proved of great benefit to children diagnosed with learning and developmental disorders. Backed by years of clinical research and supported by prominent medical leaders in the industry, Interactive Metronome soon gained national attention as a breakthrough intervention to help patients increase attention & coordination, language processing and control of impulsivity. In recent years, innovative therapists have discovered the positive effects that Interactive Metronome can have on patients with acquired neurological and motor deficits. Rehabilitation hospitals and clinics now use Interactive Metronome in much the same way as their learning and developmental colleagues, to care for patients diagnosed with stroke, brain injury, balance disorders and Parkinson's. Interactive Metronome's application is so broad because it measures and improves motor planning and sequencing, a critical part of the central nervous system.

Restrictions and notes:

* Two assessments are available.

Cost:

\$100
