

Bristol Flats-New Haven River Floodplain

Presentation of Modeling and Mitigation Alternatives

Thursday, December 11 at 1:30pm
Holley Hall Basement Meeting Room

The engineering firm SLR is finalizing a flood mitigation scoping study of the New Haven River in order to evaluate risk, identify potential mitigation alternatives, and initiate discussions on how to decrease risk in this dynamic river area south of Hewitt Lane Bridge in Bristol, Vermont.

The December 11 meeting will be held to review the existing modeling, tested alternatives, and get input from local stakeholders. Adjoining property owners and interested community residents are welcome.

This project is funded by a Clean Water Service Provider (CWSP) grant through Addison County Regional Planning. For more information, contact Andrew L'Roe at alroe@acrpc.org
