Group Energy Buy

MAP's Group Energy Buy (including gas & electric) has saved members over $3 million dollars when compared with energy costs before joining the program. How did we accomplish this? It was due to far more than lower market prices. Here's how:

- We shop across all producers to find the best price and match that with the times of the day you use the most energy. This is rarely done by Tom, Dick or Harry because it takes too much time to assess your peak demand and because they simply don't have much flexibility with the producer they represent. MAP represents you!
- We review and negotiate your contract to make sure it's in your best interest. You wouldn't believe some of the language these companies insert in these contracts that ends up costing your big time. The devil is definitely in the details!
- We represent you with the energy provider should service issues arise.
- We provide you with detailed use and cost analysis reports so you have an accurate picture of your consumption. Then we help you build a strategy which seeks out opportunities to reduce costs overall.
- We conduct site evaluations to identify Energy Conservation Measures (ECM)

Electricity - Natural Gas

Today's energy market can be summed up in two words –Complex and Volatile. The good news is that MAP's **Group Energy Buy** is here to help! We know that monitoring the electricity and natural gas markets is a full-time job and the risk of exposure to higher energy prices is always present. There are now more than *45 electric and natural gas suppliers* to choose from in Pennsylvania. With so many options, are you sure you are shopping with the ***best*** suppliers for your business?

The **Manufacturing Alliance of Philadelphia's Energy Buying Group** will help you understand your energy costs and identify potential opportunities to save.
