

STAND UP TO THE UNINTENDED CONSEQUENCES OF THE CLEAN HEAT STANDARD

The Clean Heat Standard (CHS) is a climate policy from the Massachusetts Department of Environmental Protection (MassDEP) that promotes widespread electrification, and families relying on propane will:

- **Lose their heating choice**
- **Face unaffordable energy bills**
- **Struggle with replacing costly equipment**

But it's not too late! With your help, we can make officials aware that propane is a necessary and vital energy option that residents want to keep.

SEE WHY PROPANE IS THE SOLUTION

Defend Your Choice

Let your local officials know you want the CHS to include propane! **SmarterNEenergy.org**

Propane: Clean Energy for a Sustainable Future

Safe:

Non-toxic propane is safe and does not affect water, soil, or air quality.

Clean:

Propane produces fewer emissions than grid-electricity, can be created from renewable resources, and is energy efficient.

Resilient:

Reliable, storable, and transportable, propane is ideal for remote or disaster-affected areas, while U.S. production enhances energy independence.

Versatile:

Propane is used for heating, cooking, and powering various appliances, making it a flexible, all-in-one solution.
