

Clean Energy for Earth Day and Every Day

Build and live anywhere with propane, the environmentally friendly energy for residential development and construction. Propane is nontoxic and will not contaminate groundwater, ecosystems or other sensitive habitats, making it a **clean energy choice** for builders. Propane produces far fewer emissions than diesel, gasoline, or even electricity. In fact, using propane produces **43% fewer** greenhouse gas emissions than an equivalent amount of grid electricity. On Earth Day or any other day, that's what makes propane the energy for everyone.

See how propane can reduce emissions for your next residential project at **propane.com/environment.**
