

Dear Stakeholders,

The [Massachusetts Clean Energy Center](#) (MassCEC) seeks proposals from qualified vendors to provide technical and programmatic support for its Clean Heating & Cooling Programs, which provide financial support for the installation of renewable heating technologies at residential and commercial-scale facilities. MassCEC seeks to pre-qualify professionals that can provide the following services related to high-efficiency air-source heat pumps, ground-source heat pumps, central biomass heating, and solar thermal technologies:

1. Conducting project design reviews for proposed projects;
2. Conducting on-site inspections of rebated projects;
3. Ad hoc technology-specific technical support, including evaluating emerging technologies, evaluating project performance data, and other efforts;
4. Ad hoc advising on program design, including rebate/savings/economic modeling, greenhouse gas savings accounting, and other efforts.

MassCEC encourages firms to apply for one or more of these roles. MassCEC anticipates selecting multiple vendors under this Request for Qualifications (RFQ) and entering into a contract with each selected vendor.

For further information and to view this RFQ, please visit [Clean Heating & Cooling Technical Services RFQ](#). Responses to the RFQ will be accepted through November 30, 2016.

Thank you for your continued interest in MassCEC.

Warmest Regards,
The Clean Heating & Cooling Team
