Ozinga, headquartered in Mokena, Illinois, first joined Wisconsin Clean Cities in 2016. The fourth-generation, family-owned company is in its 92nd year in business and now has more than 70 locations in Wisconsin, Indiana, Illinois, Michigan, Louisiana and Florida.

Established in 1928 in Evergreen Park, Illinois as a small coal and coke yard, Ozinga survived the Great Depression and World War II before becoming one of the first ready mix providers in the Chicago region. Ozinga has continuously expanded its product and service offerings to faithfully meet the needs of builders while holding to its longstanding commitment to provide it all at a fair price.

Today, the company provides concrete, bulk materials and energy solutions while offering transportation services through an extensive network of truck, rail, barge and ship terminals. Perhaps best recognized for its red- and white-striped concrete mixer trucks, the ready-mix concrete manufacturer produces, sells and delivers sustainable concrete products, recycled concrete blocks, gravel and other materials and provides a variety of compressed natural gas services.

In 2011, Ozinga made a bold pledge to convert all 500 vehicles in its fleet to compressed natural gas.

Whether you are looking for a natural gas solution for your large company fleet or to service your personal CNG vehicle, Ozinga can help. From custom-built CNG stations to fleet conversions, Ozinga offers a variety of CNG products and services to suit specific needs and help prepare for future growth. Ozinga's CNG services include building fueling stations, vehicle service, public fueling stations in a variety of locations, parts, station repair service and maintenance repair facilities. Ozinga CNG fueling stations are open to the public and offer 24-hour service, convenient locations near major roadways, space for vehicles of all sizes, efficiently planned entrances and exits and safe, well-lit, covered service areas.

Ozinga offers expert consultations in every aspect of compressed natural gas fueling. Its experienced team can guide you through the entire process of integrating CNG into your operation, from evaluating your current fueling systems to helping you estimate and shape your long-term needs. Ozinga's natural gas fueling consultants can recommend custom fueling solutions and its CSA-certified technicians can ensure your CNG fleet is always running efficiently.

As the Ozinga story continues, the company pledges to use its principles to build a better future for its coworkers, communities, customers and country and make the world better.
