
Woodland Hill Montessori's Annual Hour of Code

The WHMS Computer Literacy Committee is excited to welcome all elementary and middle school students to this year's Hour of Code. Because we can't be together in the classroom this year, we've prepared a self-led experience that each student can do on their own and at their schedule. Larry Peters has created a YouTube video to get started, which you can locate here:

https://www.youtube.com/watch?v=_rl9mBVLqvo&feature=youtu.be.

After watching that video, we invite each student to visit and work through at least one of the following curated list from among the many exciting Hour of Code activities. Please browse through each with your student(s) and select the one that appeals most to them and is appropriate for their age level. Then, enjoy!
