Tactical Lessons *with* Robot

The most effective SEARCH AND RESCUE solution inside burning buildings uses the structure's built-in COMPARTMENTALIZATION. The concept of PROTECTING IN PLACE is based on using the walls and doors as barriers against the fire, a method that has protected victims against flashover-level assaults.

The best firefighting tactics for the set of critical fireground factors shown below are to:

1. Attack the fire in the name of FIRE CONTROL.
2. After achieving FIRE CONTROL, VENTILATE AND SEARCH the fire area.
3. Once the fire area is VENTED, SEARCH behind the closed doors.
