USA

January 8, 2020

Dear Valued Customer,

Evonik is pleased to announce an important update to our Biolys® product. We have achieved a new milestone in our production process in Blair, Nebraska and will now be able to offer you the same high value product but with an increased L-lysine concentration of 60%. You might recall the current product has a concentration of 54.6%. This increase is the result of technical work and dedication to improving the efficiency of our production process.

As always, Biolys® will contain additional amino acids from the biomass, plus phosphorous and a high metabolizable energy.

Our target date for the production change is March 1, 2020. We know this change will mean that you will need to update your diet formulations and other processes. Our business managers will be contacting you soon to provide you with the updated nutrient specifications and other necessary product information, and also to answer any questions you might have.

We appreciate your business!

Best Regards,

Ken O'Halloran
