Dry Eye Screening Pack

All-in-One Solution for Immediate Dry Eye Detection & Documentation

This exclusive package combines **AnterVue, MeiboVue**, a pre-configured **smartphone**, and **VisuDoc software**—so your clinic can begin screening, documenting, and managing dry eye patients the moment the package arrives.

MeiboVue—Voice Activated Capture Smartphone Meibographer

- Portable, easy-to-use device for meibomian gland imaging
- Captures clear meibography without costly slit lamp add-ons
- **Voice-activated** image capture for hands-free operation
- Quick and patient-friendly screening in **pre-test or chairside workflow**
- Helps demonstrate gland dropout for better **patient education & compliance**

AnterVue—Low Cost Ocular Imaging Solution

- Attaches directly to the included smartphone
- High-resolution imaging to detect signs of dry eye, contact lens fit issues, and ocular surface conditions
- Cobalt-blue illumination + Wratten filter for Ortho-K fitting and corneal disease checks

VisuDoc Software

- Manage patient information alongside captured images
- Quick upload to your **EMR system** for streamlined records
- Enhances patient education and follow-up tracking

Free Dry Eye Educational Brochures

The brochures explain dry eye management in patient-friendly language—empowering understanding and encouraging compliance. The Meiboscale Card helps illustrate the severity of meibomian gland dysfunction—engaging and informative.
