

NeuroPharmalogics Experiencing Many Successes

BOCA RATON, Fla. (Feb. 1, 2017) – FAU Tech Runway company NeuroPharmalogics, Inc., was featured in the latest edition of a respected industry trade publication BioCentury Innovations for their research on orphan neurological diseases. The start-up also recently finished in the top three of BioFlorida's BioPitch Statewide Competition and entered into a new research agreement with City University of New York.

The partnership seeks to determine the efficacy of the drug NP-101 on its molecular target, protein phosphatase 2A, in the mammalian brain in response to a migraine-like physiological stress. This mammalian model more closely mirrors the relationship to humans, compared to previous insect studies.
