

# Places you haven't seen in our 1988 Andover Organ

How to get up in the chamber

Slider chest: when stops are pulled, these levers shift to allow air to flow into a rank of pipes

view of a rank of reed pipes

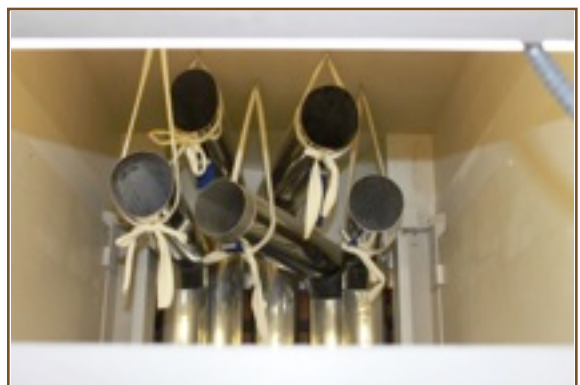

close up view of the mouths of 16' wooden pipes

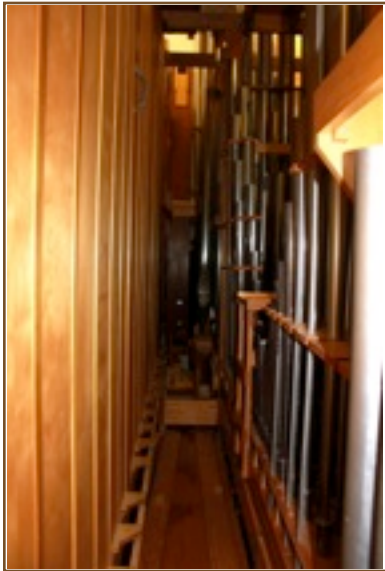

View looking in to the swell box-- these shades are controlled by the organist's foot on a pedal at the console

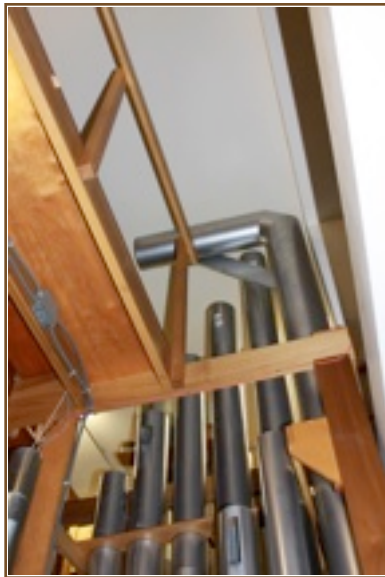

The choir division -- looking through the facade toward down into the chancel

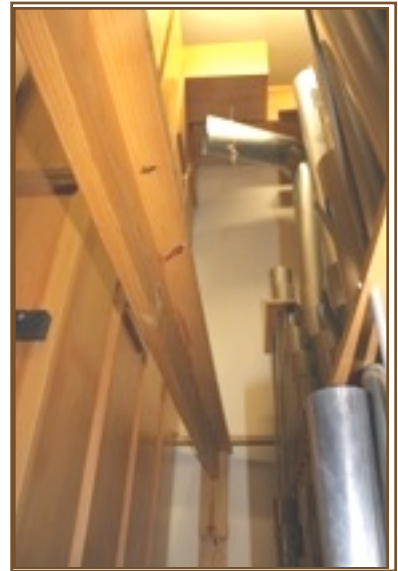

16' pedal pipes, "bent" or mitered to accommodate limited space

Walkway between divisions

Mitered pipes

Notice both  
metal and wooden  
mitered pipes

Reservoir where wind is "stored"

"Memory" board

The hole back down to the ladder  
and the hallway
