This course presents an overview of the construction industry and discusses topics such as:

- Types of construction
- Trade associations, professional societies and institutes
- Forms of business ownership
- Project delivery methods and forms of contract
- Construction contract documents
- Construction process
- Construction insurance and bonding

The target participant for the CIT course is someone who:

- is brand new to the construction industry and requires an overall introduction to the industry
- has limited general knowledge of the industry
- has a support staff role and requires deeper knowledge for career advancement
- is a technician or tradesperson with aspirations to advance to a field or office management position
- has a desire to learn as much as possible about the construction industry

About the Instructor: Cheryl McBride has 38 years of experience in the construction industry and 16 years of experience teaching construction courses for individual contractors, the Construction Exchange, the Associated General Contractors, the National Association of Women in Construction, and the American Society of Civil Engineers.
