70 Percent of Kentucky Adults Without Health Insurance are Working **320,000 Kentucky Adults and Children Remained Uninsured in 2016**

(LOUISVILLE, Ky – February 2, 2017) More than 70 percent of nearly 234,000 Kentucky adults who still didn't have health insurance in early 2016 said they were working either part- or full-time, and nearly half had incomes low enough to qualify for Medicaid insurance, according to the latest snapshot from the Foundation for a Healthy Kentucky's ongoing study of the Affordable Care Act implementation in the Commonwealth. Nearly 45 percent of these uninsured adults had completed high school, and another 37 percent had taken at least some college courses or earned a college degree.

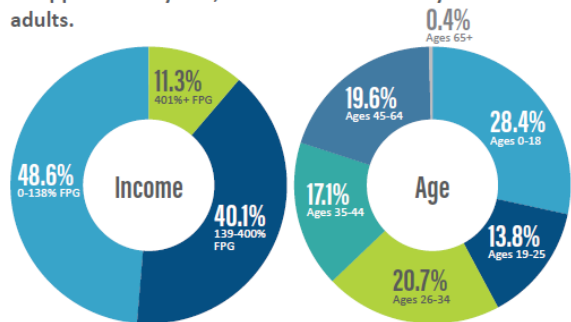

"A significant majority of uninsured Kentuckians were working adults, and most had at least a high school education, yet many were still struggling to make ends meet," said Ben Chandler, president and CEO of the Foundation for a Healthy Kentucky. "Health system reforms must take these facts into account to ensure that hard-working, low-income Kentuckians have access to important wellness care and preventive health screenings that can improve the quality of their lives while reducing costs for the entire health care system."

The snapshot showed no statistical change in the rate of uninsurance in Kentucky from 2015 to the window of time from February through April 2016. More than a quarter of the remaining uninsured during that window were children, and another 34.5 percent were young adults ages 19 to 34. And

Kentucky's Remaining Uninsured

Kentucky has experienced one of the largest drops in uninsurance since implementation of the ACA.¹ Currently, 7.3% of Kentuckians (all ages) reported being uninsured in early 2016.

Of approximately 320,000 uninsured Kentucky children and adults.

Nearly half (48.6%) had incomes low enough to qualify for Medicaid (0-138% of the Federal Poverty Guidelines). More than a quarter (28.4%) were children age 18 and younger, and more than a third (34.5%) were adults age 19-34.

Among the nearly 234,000 adult Kentuckians without insurance.

Almost two-thirds (62.8%) had a high school diploma or less education. More than two-thirds of uninsured adult Kentuckians (70.4%) were working, either part- or full-time.

nearly half of Kentucky's more than 320,000 uninsured adults and children had incomes low enough to qualify for Medicaid, but were not enrolled in the government health insurance program.

"We simply have to get the younger population covered by insurance, public or private, so they can get the health care they need to reduce their chances of developing chronic diseases later in life," Chandler said.

About the Foundation for a Healthy Kentucky

Since the Foundation opened its doors in 2001, it has invested nearly \$26.7 million in health policy research and advocacy, as well as demonstration project grants across the Commonwealth. Funded by an endowment, the mission of the nonpartisan Foundation is to address the unmet health care needs of Kentuckians by developing and influencing health policy, improving access to care, reducing health risks and disparities, and promoting health equity. Follow the Foundation on [Twitter](#), [Facebook](#) and [YouTube](#), and visit our website at www.healthy-ky.org.
