

**System** MacroView ClauseBank

**Release** 8.3

**Date** October 2016

## ClauseBank Client

- Support added for inserting Microsoft Word clauses in PowerPoint presentations.
- Added support for expanding ClauseLinks in document headers and footers.
- Installation has been aligned with the version of Windows in use. This means a single 64-bit installer is now used for both 32-bit and 64-bit Office on a 64 bit Windows computer and a separate 32-bit installer is used for 32-bit Office on a 32 bit Windows computer.

## New ClauseBank Agent

ClauseBank Agent is a new system tray application that is particularly useful for organisations that are geographically diverse and have limited available bandwidth.

The ClauseBank Agent provides one-way clause synchronization from SharePoint to the user's local computer profile so that ClauseBank can source content locally for previews, clause insertion and expansion. You can even expand ClauseLinks to content which exists locally when offline.
