## SPECIAL THANKS

With deep appreciation to the many individuals and organizations who participate in the Nevada National Governors Association Learning Network on Improving Birth Outcomes, we extend special thanks to the Office of the Governor and the following core team members:

Noreen Dentscheff, RN  
Karen Gardiner  
Michelle Gorelow, MAEd  
Tracey Green, MD  
Beth Handler, MPH  
Erin Hasty, MA  
Kelly Marschall, Social Entrepreneurs, Inc.  
Elyse Monroy, Office of the Governor  
Laurie Squartsoff

This toolkit would not be possible without contributions from the following:

John Alamodin, LSW, University of Nevada Las Vegas  
Chief Deputy Linda Anderson, Attorney General's Office  
Stephanie Borene, MPA, University of Nevada Las Vegas  
Nancy Bowen, MS, Nevada Primary Care Association  
Margot Chappel, MS, Manager, Primary Care and Health Workforce Development Office  
Kyle Devine, MSW, Bureau Chief, Bureau of Behavioral Health Wellness and Prevention  
Carolyn Edney, Center for the Application of Substance Abuse Technologies  
Marco Erickson, MS, Program Manager, Substance Abuse Prevention and Treatment Agency  
John Firestone, MSW, LADC, The Life Change Center  
Beth Handler, MPH, Bureau Chief, Bureau of Child, Family and Community Wellness  
Jan Houk, RN, BSN, Washoe County Health District  
Vickie Ives, MA, Section Manager, Maternal Child and Adolescent Health  
Brandi Johns, Nevada Primary Care Association  
Kim Lambrecht, BSN, Nevada Primary Care Association  
Linda Lang, Director, Nevada Statewide Coalition Partnership  
Ingrid Mburia, PhD, MPH, Biostatistician II, Office of Public Health Informatics and Epidemiology  
Steve Messinger, MS, Nevada Primary Care Association  
Julia Peek, MPH, Deputy Administrator, Community Services, Division of Public and Behavioral Health  
Cheryl Robinson, MD, Renown Regional Medical Center and St. Mary's Regional Medical Center  
Patricia Ramsay, MD, Pedriatix Medical Group  
Elicia Torres, Nevada Primary Care Association  
Christina Turner, Maternal and Infant Health Coordinator, Title V Maternal Child Health Program  
Stephanie Woodard, PhD, Substance Abuse Prevention and Treatment Agency

December 12, 2017

TO WHOM IT MAY CONCERN:

Since 2013, Nevada has been participating in the Nevada National Governors Association Learning Network on Improving Birth Outcomes with the mission of improving birth outcomes and the health of children in Nevada. This Network focuses on implementing policies and initiatives related to the improvement of birth outcomes, as well as adopting best practices in its implementation. One of its key goals is to reduce negative birth outcomes resulting from maternal substance use through education, prevention, and intervention efforts.

The Division of Public and Behavioral Health, and more specifically, the Bureau of Behavioral Health and Wellness and Prevention and the Bureau of Child, Family and Community Wellness have provided funds to prevention and treatment providers across the State to address this growing concern, provide access to services and support recovery for pregnant women and women with dependent children who struggle with substance use, and raise awareness on the admission priority for pregnant women at state funded treatment centers.

As a medical professional, you are in a unique position to identify substance use disorder in the patients you see every day. The enclosed packet has been assembled to provide information to assist you in assessing and linking these patients with resources. We appreciate your willingness to partner with us as we strive to support those families struggling with substance use.

Sincerely,

*Beth Handler*

Beth Handler, MPH  
Bureau Chief  
Child, Family and Community Wellness

## REDUCE NEGATIVE BIRTH OUTCOMES RESULTING FROM MATERNAL SUBSTANCE USE

This toolkit was created as an outgrowth of wider efforts through the Nevada National Governors Association Learning Network on Improving Birth Outcomes to help improve birth outcomes in core areas of focus, including: 1. Promoting Maternal, Child and Adolescent Health, 2. Expanding Healthcare Access, 3. Reducing Exposure to Alcohol, Drugs, and Tobacco, and 4. Extending Gestational Periods. Nevada's public health approach to maternal substance misuse aims to address substance use during pregnancy by providing resources to assist with screening for substance use and help locating treatment centers. State funded treatment centers must grant admission priority for pregnant women and cannot deny treatment to pregnant women, regardless of their ability to pay.

Perinatal substance use is a growing major public health concern. Perinatal substance use is linked to preterm birth, very low birth weight, infant mortality, and a range of birth defects and developmental delays. Women who use substances (pregnant and not pregnant) are found in all socioeconomic groups and place a serious burden on health care systems. Estimating the full scope of consequences of maternal substance use is difficult for many reasons, but all consequences are 100% preventable.

**Medication-Assisted Treatment** (MAT) is defined by SAMSHA as the use of medications, in combination with counseling and behavioral therapies to provide "whole-patient" approach to the treatment of substance use disorders. (<https://www.samhsa.gov/medication-assisted-treatment/treatment>)

**Neonatal Abstinence Syndrome** (NAS) is defined by The American Congress of Obstetricians and Gynecologists (ACOG) as a drug withdrawal syndrome which may result from chronic maternal opioid use during pregnancy. (<https://www.acog.org/Resources-And-Publications/Committee-Opinions/Committee-on-Obstetric-Practice/Opioid-Use-and-Opioid-Use-Disorder-in-Pregnancy#neonatal>)

**Opioid Use Disorder** is defined by The American Congress of Obstetricians and Gynecologists (ACOG). Opioid use disorder is a pattern of opioid use characterized by tolerance, craving, inability to control use, and continued use despite adverse consequences. Opioid use disorder is a chronic, treatable disease which can be managed successfully by combining medications with behavioral therapy and recovery support. (<https://www.acog.org/Resources-And-Publications/Committee-Opinions/Committee-on-Obstetric-Practice/Opioid-Use-and-Opioid-Use-Disorder-in-Pregnancy#neonatal>)

**Fetal Alcohol Spectrum Disorders** (FASDs) are a group of conditions which can occur due to alcohol exposure during pregnancy. FASDs are completely preventable if a woman does not drink alcohol during pregnancy. (<https://www.cdc.gov/ncbddd/fasd/index.html>)

Use of legal and illegal drugs, alcohol, and tobacco are often not disclosed without specific questioning. Skillful screening, counseling about risks associated with use, and referral to treatment are critical to providing optimal care. Pregnant women are often more open to behavior change, in order to give their infants the best chance in life.

### **SCREENING:**

Screening for both legal and illegal drug use, alcohol, and tobacco use is crucial and should occur at the initial prenatal visit, at least once every trimester, and at the postpartum visit for every pregnant woman.

Every pregnant woman should be screened. Providers should be aware they will miss many cases if they screen based on perception of risk such as socio-economic status, age, race or ethnicity.

Screenings should be performed in private. Protect the individual's right to privacy and screen her alone. She may be unwilling to discuss substance use (or domestic violence) in the presence of a partner or friend.

Ask specifically about drug, alcohol, and tobacco use. Inquire about use during three time periods: ever, during the three months prior to getting pregnant, and after conception but prior to the first visit.

#### **AT FOLLOW UP VISITS:**

For those screened positive at the initial visit, inquire about any alcohol, tobacco, or drug use (legal or illegal, prescribed or not) at each visit.

For those who screened negative at the initial visit, re-screen each trimester.

Re-screening is important because new use may be uncovered and the patient may disclose more as she becomes more comfortable with the clinical staff.

It is also recommended to screen for depression and intimate partner violence, using the same screening schedule: at the initial visit, each trimester, and at the postpartum visit.

Counseling about the risks of alcohol, tobacco, and drug use should occur following screening, even when the person denies use.

**EXAMPLE:** I am glad to see you are not using alcohol, tobacco, or drugs and medications except those cleared by me. This is important because these substances can cause increased risks to you during pregnancy and may cause long term damage to your unborn baby. Continue to avoid alcohol, tobacco, and drugs. Check with me before taking any medications.

#### **WHEN SCREENING IS POSITIVE:**

Ask further questions to confirm use. When use is disclosed, more questions are necessary to define the problem including details about what drugs, when, how often, with whom (to identify if other household members use, as well), intravenous use, and how much. Additional questions may help determine whether it is an ongoing problem and if she is likely to require professional help to stop.

#### **BRIEF INTERVENTION:**

- I am concerned about your use of \_\_\_\_\_ because of the risks to your health and to your baby's health.

Alcohol-major risks for the baby, most common preventable cause of developmental disabilities, major learning and behavioral problems, and congenital anomalies

Opioids and narcotics- drug withdrawal for the baby and difficulty with self-regulation for months afterwards, low birth weight

Cocaine, stimulants, methamphetamine, hallucinogens- risks of stroke for mother or baby, premature delivery, too small a baby, difficulty focusing on caring for yourself and for the baby

Tobacco -- risks of premature delivery, too small a baby, respiratory problems for the baby, SIDS, and hyperactivity risks in the child

Marijuana- risks of premature delivery, too small a baby, developmental delays, respiratory problems for the baby, SIDS, and hyperactivity risks in the child

**ADDITIONAL QUESTIONS TO CONTINUE THE CONVERSATION:**

- Are you concerned about the risks to your health and your baby's health?
- Do you think this is something you can change?
- These habits can be hard to give up. Do you need help addressing this problem? What kind of help would you like?
- Are you ready to tackle this now or do you want to give it some thought over the next week?
  - If now, let's develop a plan together.
  - If not now, we'll schedule a time for you to come back in a week so we can develop a plan together.

## **SCREENING, BREIF INTERVENTION, AND REFERRAL TO TREATMENT (SBIRT) RESOURCES**

### **Screening:**

- Healthcare professionals can learn screening techniques to identify patients with, or at risk for, substance use problems and talk to them about consequences and behavioral change. To learn more about SBIRT, visit:  
<https://www.integration.samhsa.gov/clinical-practice/sbirt>.
- Motivational Interviewing is a clinical approach helping people with mental health, substance use disorders, and other chronic conditions. To learn more, visit:  
<https://www.integration.samhsa.gov/clinical-practice/motivational-interviewing>.
- Additional Screening Tools can be found at:  
<https://www.integration.samhsa.gov/clinical-practice/screening-tools>.

### **Training:**

- SAMHSA offers a free 5-hour online training module through Ideas Exchange. This training is intended for a general audience. Interested parties may contact Project Coordinator, [stephanie.borene@unlv.edu](mailto:stephanie.borene@unlv.edu) for registration information.
- Health-e-knowledge offers a free 1.5 hour Foundations of SBIRT Training and a free 4 hour SBIRT for Health & Behavioral Health Professionals:  
<http://healtheknowledge.org/course/index.php?categoryid=50>.
- The Institute for Research, Education, & Training in Addictions (IRETA) offers a free 10-12 hour SBIRT 101 training. They also offer an SBIRT for Adolescents course that is 3 hours. <http://ireta.org/improve-practice/addiction-professionals/online-courses/sbirt-101/>.
- Additional training and webinars on SBIRT to ensure fidelity to evidence- based practices are available at: <https://www.integration.samhsa.gov/clinical-practice/sbirt/training-other-resources>.

### **Reimbursement:**

- Reimbursement for screening and brief intervention is available through commercial insurance, Medicare, and Medicaid:  
<https://www.samhsa.gov/sbirt/coding-reimbursement>.
- The American Medical Association (AMA) has approved several billing codes allowing reimbursement for providing screening and brief intervention services:  
[https://www.integration.samhsa.gov/sbirt/Reimbursement\\_for\\_SBIRT.pdf](https://www.integration.samhsa.gov/sbirt/Reimbursement_for_SBIRT.pdf).

**\*For more information, email [sbirt@unlv.edu](mailto:sbirt@unlv.edu) or call 702-895-0090**

## REFERRAL RESOURCES

- Pregnant women have admission and substance use treatment priority at treatment programs funded by the SAPTA Block Grant (per 45 CFR Part 96).
- SAPTA Block Grant funded non-profit centers must not deny substance use treatment to persons unable to pay, and may provide sliding scale payment options and serve Medicaid-eligible clients.
- The substance use treatment centers listed on the following pages are all SAPTA funded and give pregnant women admission and treatment priority. They cannot deny substance use treatment based on the ability to pay.
- All treatment centers listed on [www.SoberMomsHealthyBabies.org](http://www.SoberMomsHealthyBabies.org) are state-funded and offer priority treatment admission to pregnant women.

### ADDITIONAL REFERRAL RESOURCES:

- Helplines:
  - NV 2-1-1 (or text your zip code to 898211)
  - 24-Hour Nevada Substance Abuse Hotline 1-800-450-9230
  - Crisis Call Center 1-800-273-8255
- Treatment Locators:
  - Foundation for Recovery – Nevada Resource Directory  
<http://www.forrecovery.org/recovery-support-services/nv-resource-directory/>
  - SAMSHA Behavioral Health Treatment Services  
<http://www.forrecovery.org/recovery-support-services/nv-resource-directory/>
  - SAPTA Prevention and Treatment Providers
  - <http://dpbh.nv.gov/Programs/ClinicalSAPTA/dta/Providers/SAPTAProviders/>

## Program Overview

The Sober Moms Healthy Babies (SMHB) website is part of an effort launched by Maternal and Child Health (MCH) Programs and the Substance Abuse Prevention and Treatment Agency (SAPTA). The SMHB website focuses on preventing substance misuse during pregnancy and providing women, their families, and provider's information on resources and treatment options.

As Nevada receives federal funds from the Substance Abuse Prevention and Treatment Block Grant and the state must meet the requirements of 45 CFR 96.131, *Treatment services for pregnant women*, which states: *"The State is required to, in accordance with this section, ensure that each pregnant woman in the State who seeks or is referred for and would benefit from such services is given preference in admissions to treatment facilities receiving funds pursuant to the grant. In carrying out this section, the State shall require all entities that serve women and who receive such funds to provide preference to pregnant women."*

## Program Challenges

Perinatal substance misuse (licit and illicit) is a growing public health problem. It has been linked to preterm birth, very low birth weight, infant mortality, and babies born with a range of birth defects. Substance using women (pregnant and not pregnant) are found in all socioeconomic groups and place a serious burden on health care systems. However, estimating the full extent of the consequences of maternal substance misuse is difficult for many reasons, but all consequences of maternal substance misuse are **100% preventable**. The best approach to reducing the tremendous toll substance abuse exacts on individuals, families, and communities is to prevent the damage before it occurs.

## Collaboration

Nevada's public health approach to maternal substance misuse aims to prevent substance misuse in pregnant women and provide information to women of childbearing age, providers, and concerned family and friends. The National Governor's Association (NGA) Learning Network on Improving Birth Outcomes Collaborative has four workgroups focused on improving birth outcomes; 1. Promoting Maternal, Child and Adolescent Health, 2. Expanding Healthcare Access, 3. Reducing Exposure to Alcohol, Drugs, and Tobacco, and 4. Extending Gestational Periods. The third workgroup, Reducing Exposure to Alcohol, Drugs, and Tobacco, utilizes the SMHB website and media campaign to increase awareness and resources to providers, partner agencies, and the public. The Maternal and Infant Health Program assists, collaborates with, and supports both the SMHB website and NGA workgroup, along with other organizations with similar goals and objectives.
