

Over 200 Rare Antibiotic-resistant Genes Found in Bacteria in 27 States, Report Shows

A Vital Signs [report](#) released by the Centers for Disease Control and Prevention (CDC) revealed that more than 200 rare antibiotic-resistant genes were found in bacteria tested in 2017.

According to CDC principal deputy director, Dr. Anne Schuchat, 2 million Americans get sick from antibiotic resistance, and 23,000 die from such infections each year.

The CDC is now promoting an aggressive containment strategy that includes rapid detection tests and screening for reducing the spread of antibiotic resistance. They also ask that you take simple preventive measures like washing your hands and getting vaccinated. For more information, click [here](#).
