

From the Desk of EGSA Codes & Standards Surveillance Committee Chair, Robert Simmons, P.E.

The Codes & Standards Surveillance Committee (C&SSC) will conduct a comprehensive review of the standards that affect the on-site power industry. It is our hope that we can help members make sense of the ever-changing codes and standards. Whether you are in sales, engineering or corporate management, the information presented – and opportunity for influence – regarding the IBC, UL, NFPA, IEEE, SAE, NECA and more will enhance your conference experience.

We will have a presentation from the Working Group on diesel fuel quality requirements with their recommended changes that were presented to NFPA110 for Chapter 8.3.7. The Diesel Working group hopes to get a consensus from C&SSC members to support their proposal. We will also hear from our active Working Groups on UL 2200 and Seismic Certification.

Some of the topics that we will cover include:

- NFPA 110
- Update on UL2200 & ULC2200
- Update on UL2201 & ANSI adoption as CO emissions standard
- Updates on IEEE 1547
- Member feedback regarding Codes and Standards Training.

What are some of the most pressing questions encountered in codes and standards?

In preparation for the meeting, we ask that C&SSC members review the latest Standards article in recent issues of *Powerline* Magazine, and that you review the minutes from our Fall Conference. We will also send an agenda with complete topics of discussion.

See you in Albuquerque!
