

FCAA DATA SPOTLIGHT

HIV PHILANTHROPY FOR THE US SOUTH

The US South is the epicenter of the National epidemic - home to 44% of all people living with HIV/AIDS in the US. However, this region only receives roughly less than a quarter of total HIV-related philanthropy for the US each year. These conditions are even more stark in the nine "Deep South" states - as defined by the Southern AIDS Strategy Initiative - home to the highest HIV diagnosis rates and number of people living with HIV than any other US region.

Distilled from FCAA's annual resource tracking report, *Philanthropic Support to Address HIV/AIDS in 2014*, the following data offers an important new benchmark: the first analysis of HIV-related philanthropy for the US South.

THE NEED

The US South has many factors that contribute to the high HIV infection rates including: transportation and financial barriers to receiving HIV care and testing; areas of extreme poverty; and HIV-related stigma and discrimination, among others.

THE US SOUTH HAS:

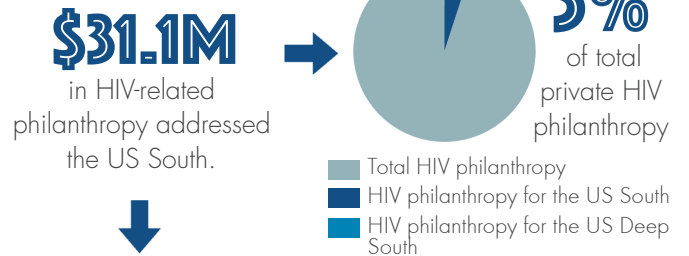

The **10** metropolitan statistical areas (MSAs) with the highest rate of new infections.

The **4** states with the highest proportions of people without health insurance.

8/10 of states with the highest rates of new HIV diagnoses.

52% of deaths attributed directly to HIV or AIDS, and **THE HIGHEST DEATH RATES** among individuals diagnosed with HIV.

IN 2014:

GENERAL FUNDING DISBURSMENT

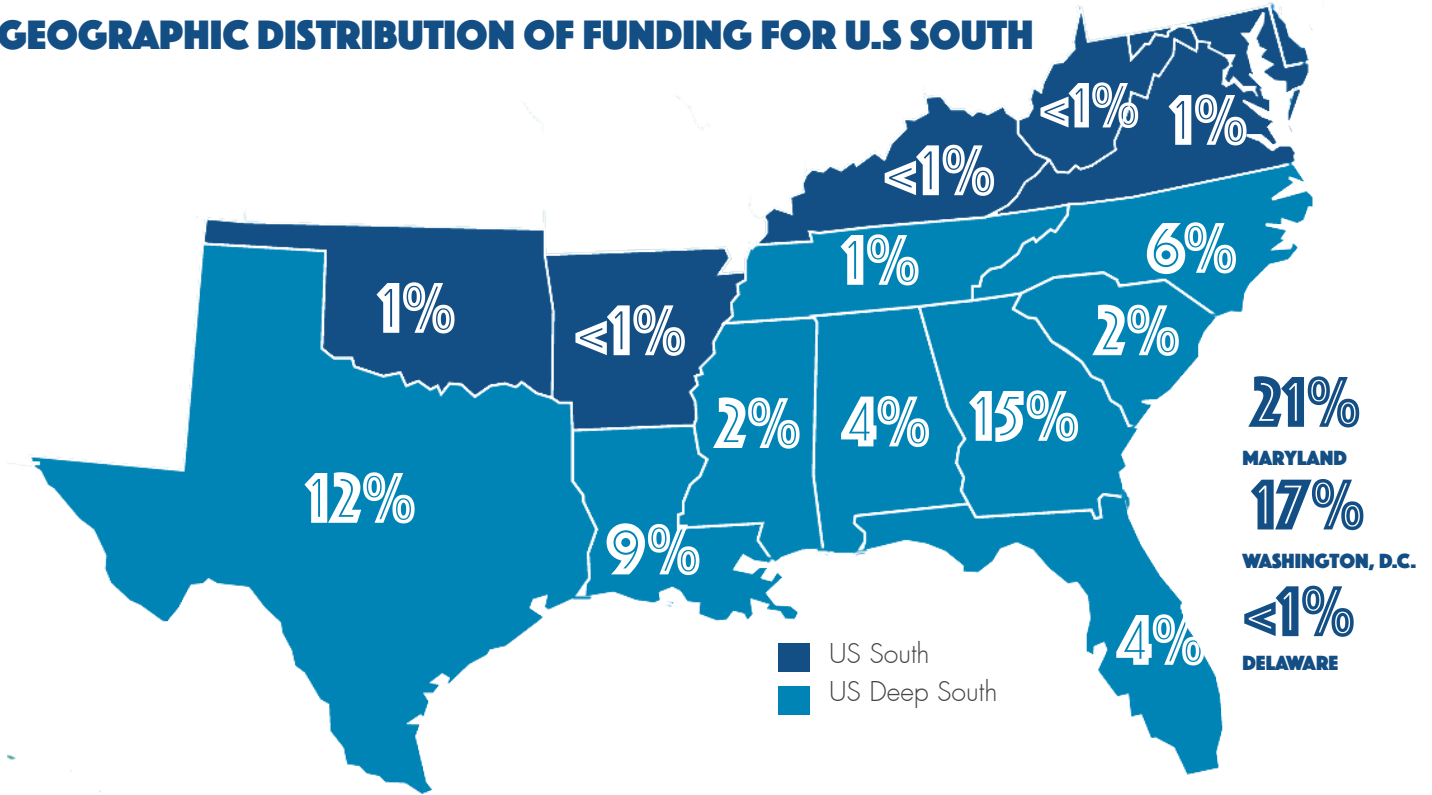

US SOUTH **\$31,093,031** **US DEEP SOUTH** **\$16,933,045**

61 **FUNDERS** **38**

698 **GRANTS GIVEN** **418**

329 **GRANTEE ORGANIZATIONS** **212**
