Attention ETA members! It's time to submit nominations for the Annual Awards!

2017 Technician of the Year
2017 Educator of the Year
2017 Chapter of the Year

Award winners will be announced in the March/April 2018 issue of the *High Tech News* and will be recognized at the ETA Annual Awards Banquet during Education Forum, March 5-9, 2018 in Orlando, FL.

This completed form can be mailed or faxed to ETA Headquarters or submitted electronically at: <https://www.surveymonkey.com/r/ETAawards>

Please send, scan, or fax form to:
ETA International
5 Depot Street
Greencastle, IN 46135
Phone: 800.288.3824
Fax: 765.653.4287
eta@eta-i.org

Submission Deadline: December 1, 2017

Nominations For 2017 ETA TECHNICIAN or EDUCATOR of the YEAR

☐ **Technician of the Year**

☐ **Educator of the Year**

☐ **Chapter of the Year**

Nominee name: _____

Employer/School: _____

Contact Info(Phone/email): _____

Reasons you feel this nominee should be considered for ETA's highest award must be attached or emailed to: eta@eta-i.org.

Technician of the Year - Someone who strives to learn and stay up-to-date within their industry, serves fellow technicians by teaching or mentoring, and holds oneself to the highest level of professionalism.

Educator of the Year - Someone who provides outstanding instruction to those in the electronics field. Dedicated to the education of others at the Secondary or Post-secondary level.

Chapter of the Year - A group of students or local technicians actively increasing awareness of the many exciting career opportunities in the electronics industry, participating in networking opportunities and contributing to their school and/or community.

Signature: _____

Last Year's ETA Annual Award Winners

ETA 2016 Educator of the Year Clarence Owen Jackson, FOT

Jackson's entire 42-year career has been devoted to providing his technical expertise to the military as a civilian trainer at Fort Gordon. As an instructor at Ordnance Electronic Maintenance Training Department (OEMTD), he made sure all personnel in his classes were adequately trained and certified as qualified to succeed in their military careers and were prepared to transition into civilian careers.

ETA 2016 Technician of the Year Jay Thompson, CETsr

Thompson's career spans over four decades and some of his most notable accomplishments include designing and installing the first fuel telemetry system used in Indy Car racing as well as winning an Emmy award for outstanding technical remote video engineering. For the last decade, Thompson has been a communications unit leader (COML) for the US Department of Homeland Security and US Department of Health and Human Services - Disaster Medical Assistance Team CA-4.

2 ANNUAL ETA AWARD NOMINATIONS

ETA is now accepting nominations for the 2017 Annual Awards. Please submit your nominations for Educator of the Year, Technician of the Year and Chapter of the Year by December 1, 2017.

4 STEM RECRUITMENT AND OUTREACH

Learn how this Texas educator creates a level of excitement to recruit students for STEM and engineering-related classes that lead to high-paying jobs and careers.

8 IDEAS FOR BOOSTING ENROLLMENTS IN ELECTRONICS CLASSES

This educator developed a unique approach to teaching electronics that can successfully relate to people looking for new ideas on how to start careers in the industry.

20 ADULT DEGREE PROGRAMS FOR TECHNICIANS!

Technicians who desire additional education to move upward or to broaden into related technical and business areas can now take advantage of the growing number of flexible adult degree programs offered at small regional colleges or universities that cater to adult learners.

22 DIGITAL VIDEO EDITOR CERTIFICATION RELEASED BY ETA

The worldwide increase of digital filming, editing and producing has made video the preferred media choice and requires fundamental knowledge and skills that can be validated with ETA's accredited DVE certification.

23 FIBER OPTIC TEN GIGABIT NETWORKING LAB

Wharton County Junior College students utilize fiber optic hardware to connect personal computers to the Internet while developing troubleshooting skills.

+ department

10 NEW ETA CERTIFIED TECHNICIANS

ON THE COVER: ETA provides an opportunity for student members to begin networking and explore careers in their areas of interest and future profession. ETA student chapters open the door to opportunities that will help students develop their professional identity. Find out how to establish an ETA Student Chapter by calling ETA today at 800-288-3824 or visiting <http://www.eta-i.org/chapters.html>.

STEM Recruitment and Outreach

by J.B. Groves | FOT, Wharton County Junior College, Texas

Groves (back row, far right) with the first group of students he took to the NASA Community College Aerospace Scholars.

Here's a little background of how this instructor was introduced to STEM. I'm sure all the *HTN* readers know that "STEM" stands for Science, Technology, Engineering, and Mathematics. Sometimes, the folks at NASA add a "G" to it, standing for Geography.

This endeavor started when I received an invitation to become a point of contact for a program created by San Jacinto Community College at NASA called Texas Community College Aerospace Scholars, which was eventually shortened to Community College Aerospace Scholars (CAS), which was my first outreach in STEM.

Once the paperwork was filled out and sent to NASA, I called the NASA coordinator to introduce myself and start the recruitment process in the fall of 2001. The actual activity of going to Johnson Space Center (JSC) would not occur until the spring of 2003.

I was able to convince 11 students to apply and pay the \$35.00 application fee, do the required online training and exams, create several essays, design a Mars Rover drawing. The assigned three and one half days' event at JSC was attended by numerous other community colleges from across Texas.

The program basically subjected the students to a project management scenario of designing, building, marketing, testing the team's Mars Rover prototype, and correcting the bugs in the system. It reminded me of a graduate-level project. I have never seen students work so hard and stay up all night working in their respective teams into the wee hours of the morning. The level of excitement for the kids was overwhelming.

There is so much more I could write about this program, but instead, here is the web site for the readers to review: <https://nas.okstate.edu/ncas/>

I was bit by the STEM bug in the field of robotics and what I

did next would change my life.

I made a full report to my supervisor and the Vice President of Instruction the week following the event. I then asked permission to teach a special topics class to prepare the following years CAS participants in the field of robotics. The local independent school district learned of my class and the Technology Coordinator for the district asked that I write an EXXON-Mobil Technology Grant to solicit funds to train the district's science teachers on how I taught the class.

I wrote the grant and submitted the paperwork to the Technology Coordinator who, in turn, submitted it to EXXON-Mobil. A week later, she had the money. I then planned and taught the one-day workshop/class, the school catered lunch, and bought robotic kits for the district. I realized that I was on to a good thing here, so I sought additional training in the field.

Senator Robert Dole's Trade Adjustment Act was my ticket to being trained in robotics. Since I had been laid off due to foreign competition from a major oilfield service company in Houston, I could take examinations at Texas Workforce and qualify for retraining in an occupation of my choosing, provided they had a vendor that was approved to do the training. I found such a company in Clear Lake that was a part of the Petroleum Extension Service at The University of Texas-The Institute of Robotics.

I completed the following curriculum over a period of eleven weeks:

2003-2004 The Institute of Robotics and The University of Texas at Austin

320 hrs Marine and ROV Technician/Pilot Certification (IMCA Grade II)

Medic First Aid/CPR/ Blood Borne Pathogens 8 hrs

High Voltage Safety/Lock Out-Tag Out	8 hrs
Parker Industrial Hydraulics	45 hrs
Helicopter Safety and Offshore Survival	48 hrs
Fiber Optics course	4 hrs
Introduction to ROV Operations	40 hrs
Crosby Rigging Course	16 hrs
ROV Real Time Field Training	50 hrs
Deepwater SONAR	8 hrs

Basic Electricity and Electronics Lab 100 hrs

(Amplifiers, Schematics, Cabling, Oscilloscope, TDR, OTDR, Megohmmeter, and Multimeter, and Multimeter Test Equipment, Mathematics, Soldering, Electronic Circuits, NEC code NFPA 70 Regulations, Electrical Safety NFPA 70 E Standards, Hand Tools and Interfacing).

2003 The Institute of Robotics and The University of Texas at Austin **60 hrs Fiber Optic Installer Certification – ETA**

Certification No. TXFOI1234
Theory of Fiber Optics
Splicing Fibers with a Fusion Splicer
Fiber and Cable Construction
Splicing fibers with Mechanical Splicers
Multi-mode vs. Single-mode fiber
Testing the spliced fibers with an OTDR
Fiber Optic troubleshooting techniques
Testing with a power meter and light source
Test and measure Cables and Connectors
Optical Transmitters and Receivers
Plant enclosures
CAT-5e

This training was the beginning of my becoming a Subject Matter Expert in both robotics and fiber optics. It has changed not only my professional and personal life, but hopefully, that of my students as well. I told myself that if only one percent of the students I taught in these outreach recruitment classes and activities became engineers, that I had fulfilled my commitment to the country.

I would like to close this article with a few student stories that have touched me deeply in the recruitment of the students for STEM fields.

The first story is about a student who gave up his electrical company to come back to college and get a degree. I recruited Kevin to attend NASA's CAS. He felt he was not qualified to go, yet he did what was required of him and had a wonderful experience. A year later, I asked him to join me with a group of students I was taking to the NASA Project Management conference in Galveston. He learned more about what engineers do and decided that he wanted to become an engineer too. Based

on his resume showing project management training at NASA, General Electric hired him as a green badge contractor - not reviewing electrical diagrams, but training Master's degree-level college students how to do it as well. He later left GE and went to work at an HVAC company for a substantial increase in pay. He currently works for a major electrical contractor in Houston designing, configuring and implementing Programmable Logic Controllers (PLCs) in gas fields and bringing the production online in a control room making six figures a year in salary. I'd say this is a successful STEM student story.

My second story has to do with an elementary school student that I will name David. I helped my Discovery College coordinator recruit students for the summer program in STEM classes with an activity in Rocketry (I know this is a departure from robotics, but please bear with me) and air engines. I had two rocket launches for two groups of students and one of the rockets landed on top of the school, which made the students yelp and holler. As the students left, I had a rocket in my hands. One little guy with jet black hair and deep brown eyes approached me and asked if he could have the rocket I was putting away in my launch box. He told me that he wanted to be an astronaut when he grew up. I handed him the rocket and asked that he take it home and tell his parents why he got it and what he wanted to be when he grew up and asked that he always do his best in school, especially in math and science. I gave it to him with the hope it is a reminder that he realizes his dream.

The last story for the readers is serendipitous. I have kept track of all the students of the first group of students I took to the NASA CAS in 2002/2003 except for one, the young lady that was pregnant with her first child on the trip. Fast forward to October 2016 (fourteen years since that trip) when I was asked by my supervisor to do recruitment for our department at several local high schools and a science day for younger students to get them interested in STEM occupations. I was in front of my fiber optic equipment that I was demonstrating, when a young lady approached me and asked that always leading question - "Are you Mr. Groves?" Then I realized she was Michelle from that first NASA CAS group. She indicated that all of her associates and even family didn't believe she had gone to NASA. On my flash drive, I had the beginnings of this article with a photo of that first NASA CAS group and her obviously in the picture. Her daughter asked what her mom was looking at, which was actually two people attending NCAS - Michelle and her unborn baby. Michelle now has her own technology company. She is able to help her nephew attend the college where I teach and take my ETA-approved Fiber Optic Installer class to get certified.

I have gone full circle and hope it may never be broken. Please recruit your students for STEM and engineering-related jobs and careers. The country needs them now and in the near future more than ever. //

Ideas For Boosting Enrollments in Electronics Classes

by Robert DuHamel | RSD Academy

Robert DuHamel

I have dedicated much of the last 15 years to developing and teaching an information technology course that includes three months of basic electronics technology for Advanced Training Associates (ATA), in El Cajon, CA. ATA already offered a one-week seminar in electronics technology aimed at experienced military technicians who want to obtain industry certification.

ATA decided to expand this seminar into part of a nine-month information technology course that included three months of electronics technology.

My typical student at ATA had no technical background whatsoever. Within my first week of class, I had students in the admissions office complaining that they didn't understand what I was talking about. I had to find a way to relate to them - and find it fast - or many of them would give up and quit.

I must have done something right because over the 12 years that I taught the course, I had only two or three dropouts, a near 100% pass rate on certification exams and a better than 80% job placement rate.

But ATA was sold and the new ownership decided to phase out the electronics portion of the IT course. Why? Web statistics showed that few prospective students were searching for electronics courses. In addition, many students attracted to the Information Technology program didn't want to study electronics.

By this time, I was on a mission. I had developed a unique approach to teaching electronics that can successfully relate to people for whom traditional methods failed. I was in a position to semi-retire and devote more time to this ongoing project, so I left ATA to do exactly that.

When I contacted ETA International to spread the word that I am putting my textbooks and video lectures online for anybody to use free of charge, it led to an invitation to join ETA International in a campaign to promote electronics technology as a career path. I didn't expect my humble announcement to lead to involvement in a larger crusade. Nevertheless, I spent much of the following weekend brainstorming about what can be done to reverse the situation. Here are some rather basic raw ideas.

Four things that need to be done to revive the interest in electronics today are:

1. Get young people interested in electronics as a career by introducing them to Makers Movement electronics activities

2. Direct them to a structured learning environment
3. Get them credentialed (diplomas and/or certifications)
4. Steer them to entry-level jobs.

Getting people interested:

People just don't seem to be as interested in electronics as they were in the past. Look at the changes in amateur radio. Hams used to start out building their own transmitters and receivers. Now they buy expensive equipment or use software-defined radios. Maybe the seasoned hams should try to encourage young people starting in amateur radio to build their own novice class equipment again.

Direct people to a structured learning environment:

Once people are hooked, they need to be directed into a structured learning environment. Those who have the time and resources can learn electrical engineering at a university. For those interested in becoming technicians, it's a lot tougher. There are just not enough brick and mortar schools teaching electronics for technicians.

That is where I come in. I am building an online learning site called RSD Academy (rsdacademy.net). The site has a structured environment with reading assignments, video lectures and other suggested resources. Coming soon will be online exams to measure progress. It's all free for anybody to use.

The problem with online schools is that they don't provide supervised hands-on learning. Maybe the answer is to partner with businesses that hire electronics technicians. After all, they have a stake in solving the shortage of trained technicians.

Credentials:

This is, of course, where ETA International comes in.

Entry-level jobs:

Perhaps ETA International and member technicians could campaign for businesses to offer more entry-level jobs. Of course, businesses want people with experience, but they aren't going to find them if someone doesn't provide opportunities to gain that experience.

This is what I came up with. I hope others can add to this list. I think it is our responsibility to find ways to rekindle interest in electronics technology. The jobs are out there and it's an exciting field. I look forward to hearing other people's ideas to spread the word. Online schools may be the answer for most students now. //

Adult Degree Programs for Technicians!

by Glen Spielbauer

Technicians who desire additional education to move upward or to broaden into related technical and business areas can now take advantage of the growing number of flexible adult degree programs offered at small regional colleges or universities that cater to adult learners.

Residential big-name private and huge state university systems are now increasingly obsolete for many students. The traditional student who goes straight from high school to college is becoming a relic of the 1950s. Mature students with family and job responsibilities are now the new normal at a growing number of institutions. Dormitories, athletics, fraternities, and social events are not considered essential to older, more mature students who desire a no-nonsense education. Yet, many four-year colleges and universities still do not have adequate online or flexible on-campus programs to meet the growing need of adults facing career and personal development needs.

Big name private universities, along with huge state universities are over-rated, over-priced, and obsessed with esoteric research, graduate programs which are over-crowded, and fund-raising. Sports and partying are a severe distraction that interferes with the educational goals of serious mature students.

Community colleges and a small (but growing) number of four-year colleges and universities now cater to adult students, and accept all transfer credits from two-year schools in special Bachelor degree programs designed for those with technical Associate degrees (such as engineering technology, robotics, or manufacturing technology).

These flexible Bachelor degree programs build on the technical Associate degree and include additional topics such as supervision, operations and project management, business statistics, computer spreadsheets and database management. These degree programs often go by names such as technology management, industrial operations, training and development, or applied studies.

Many technicians go further in education to earn an engineering degree; however, engineering can be an unstable career in today's volatile business environment with rampant corporate downsizing. Technical careers with upgrades to supervision or branching to other technical fields that fit with electronics may be a better option for many technicians. Some technical fields are merging together, such as mechatronics (mechanics and electronics merging together in a unified system - such as industrial robotics or computer numeric machine control).

One can become a higher level contributor with additional coursework in technical writing, technical sales, or factory workflow analysis. This would apply to technicians in electronics manufacturing, a repair facility, or a company that makes non-electronic products - but has very high-tech electronic and computer process control - such as a petroleum refinery,

automobile factory with advanced robotics, beverage bottling, plastics, or pharmaceutical manufacturing.

Both two- and four-year schools offer certificate programs for working adults that are in demand by both students and employers - in fields such as computer networking, database administration, web development, and project management. Such certification programs offer quick entry to high paying careers without the requirements that many consider unnecessary. Other schools have "capstone" Bachelor programs that build on transfer credits from a technical Associate degree, which may include returning Veterans who are taking advantage of the GI Bill and getting credit for their military training and experience.

Example Programs

Take a look at such programs at Amberton University in the Dallas area, Dallas Baptist University, and Hannibal-LaGrange University in Missouri. A growing number of four-year universities have also set up executive Master of Business Administration programs. A technician can go into related technical areas, or explore the business and management side of a technical enterprise.

The Bachelor of Applied Studies program at Hannibal-LaGrange University (HLGU) gives employees with technical training or an AAS degree from post-secondary accredited institutions, new career options. As stated in the website (www.hlg.edu) with an Associate degree (AS, AA, or AAS) or its equivalent from an accredited institution, you may be able to complete a Bachelor degree in as little as 18 months. Now, technically-educated adults can develop skills in leadership, communication, problem solving, and other expertise areas necessary in management positions.

HLGU touts its advance degree program as the "solution for working adults" which offers BS and BAS degrees in convenient time frames. One can broaden career options with a Bachelor degree and get management, problem-solving, and communication skills. Hannibal-LaGrange University and several local community colleges have signed agreements to allow for smooth transitions from their respective institution to HLGU.

Community colleges and those four-year universities that cater to mature, working adults with family responsibilities are the schools that will thrive in the future. Many people with Bachelor and even graduate degrees find community colleges vital for career changes - which is why one educator in Texas refers to community colleges as the "new graduate schools of the 21st Century" (VALVE Magazine, Fall 2008).

Technicians can now explore the growing number of two- and four-year colleges and universities that offer flexible, high quality degree programs for the serious person who wishes to expand career horizons. //

NEW ETA CERTIFIED TECHNICIANS

The following is a list of professionals who have earned new certifications between August 1 and September 30, 2017 under one or more of ETA International's 80+ certification programs. Names of these highly qualified technicians have earned ETA's formal endorsement and approval.

Digital Video Editor Certification Released by ETA International

People with artistic, enterprising and investigative interests who are also skilled in hot technology areas, such as computer-aided design, enterprise application integration software, graphics or photo imaging software and web page creation should consider attaining ETA International's new Digital Video Editor (DVE) certification to advance their careers. The worldwide increase of digital filming, editing and producing has made video the preferred media choice and requires fundamental knowledge and skills that can be validated with ETA's accredited DVE certification.

Becoming a digital video editor requires a combination of education, technical skills, visionary capabilities and on-the-job experience. ETA® International's new DVE certification is a great first step toward a successful career and is designed for technically savvy professionals using computer hardware and video editing software to make sure the images, sound, special effects and other aspects of video all fit together logically and accurately.

"In order to establish a more clear path to becoming an editor, ETA's new DVE certification can assist technically proficient individuals with creative sensibilities that allow them to properly convey a message in finding valuable careers in a competitive job market," said ETA President Teresa Maher, CSS.

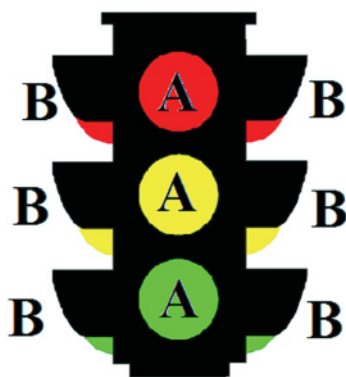

The U.S. Department of Labor's O*NET Online deems Digital Video Editors as a "Bright Outlook" career, meaning jobs are expected to grow rapidly in the next several years, will have large numbers of job openings or are new and emerging occupations. DVE jobs are expected to grow much faster than average, by 14% or higher, through 2024. Median wages for a DVE in 2016 were \$30.18 hourly and \$62,760 annually.

A creative eye to detail, advanced technical skills and the flexibility to work long or unusual hours are great assets, as are a good sense of creativity and the ability to collaborate with directors and producers to achieve the product they desire.

Aside from having in-depth knowledge of the technical aspects of video production, many editors are proficient in computer programs related to their assignments. In order to perform the professional tasks associated with the development of electronic digital videos for digital technology, DVEs must be knowledgeable in the following technical areas: screen format, video fundamentals, digital video fundamentals and formats, audio fundamentals, digital data rates as well as video and audio editing fundamentals. The DVE certification will examine each area in depth to fully prepare the examinee for successful and lucrative careers.

ETA extends special appreciation to the Subject Matter Experts who volunteered their time and expertise to the DVE committee, including: Ali Muhammad; Richard Booth, FOI, FOT; Michael Goshen, CST, NST, ITS; Tcat Houser, RESIma, CST, NST; Ed Kirkpatrick, PVI, CSS; Brian Klier, Joe Maher, CSM, CSS; Muhammad Siddique; Muhammad Yousaf. //

BELOW IS THE CODE FOR A TRAFFIC LIGHT USING A PARALLAX BASIC STAMP 2

```
"Model Train Traffic Light Controller"

' ($STAMP BS2)

SPOT WHAT IS WRONG

STEMulating Students' Minds

Endress+Hauser invited ETA to attend its fourth Community Career+Education Forum to STEMulate students' minds. In partnership with Central Nine Career Center and Aspire Johnson County, nearly 700 Indianapolis, IN-area students, parents and educators were geared up and ready to learn about STEM, future career opportunities and participate in the fun learning activities.

"Each year we continue to introduce new exciting and engaging ways to show STEM," said Holly Wegeng, meeting and event planner, Endress+Hauser. "We want students to know there are numerous possibilities and it can, in fact, be fun!"

ETA was excited to be invited to this event and was encouraged to see how this company introduced some fun STEM-related careers to students and parents.

Johnson Fondly Remembered

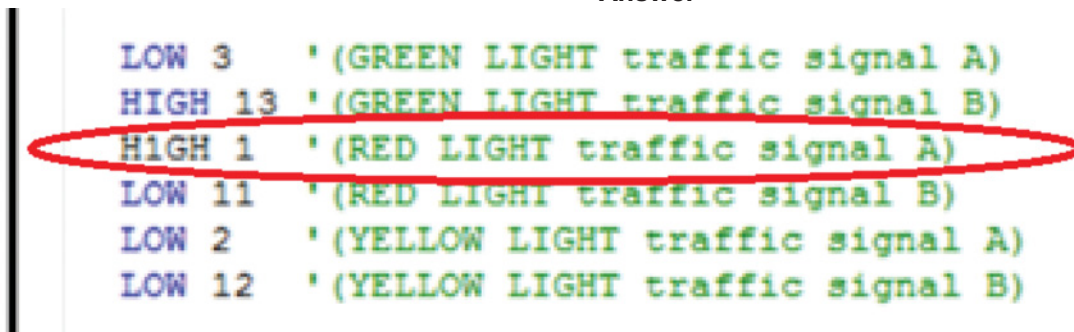

William "Bill" E. Johnson passed away on May 20, 2017. He was a leader in the Indiana Electronic Service Association (IESA) and the Indiana Satellite Dealer's Association (ISDA) as well as both national satellite dealer organizations: Satellite Dealers Association (SDA) and the Satellite Dealers Coalition (SEC). During the years he was active, the IESA and ISDA often conducted joint meetings and seminars with ETA International.

Fondly remembered by ETA Founder and CEO Emeritus Richard "Dick" Glass, he said, "Bill was one of the best teachers about satellite technology and business methods. He also had a business of providing and installing those tall lighting poles that are on all the internet ramps."

Johnson was owner of Preferred Products Sales Company and CEO of American Electronic Registers, Inc. in the Indianapolis area. He served his country in the U.S. Military and received the ISDA "Outstanding Person of the Year Award" in 1989.

Answer

Note that the HIGH 1, Did not change from BLACK to BLUE this indicates a syntax error in this case the "I" in the HIGH was replaced with a "1"

CORRECTIONS FROM THE SEPT/OCT ISSUE

In the *Three Phase Power Examined* article, it should have stated 3600, not 3600 degrees; 1800, not 1800 degrees; -1200, not -1200 degrees; -2400, not -2400 degrees; 00, not 00 degrees; and so forth.

Steve Fleeman's retirement announcement should have included the fact that he served as the 2012-2013 ETA Chairman.

Fiber Optic Ten Gigabit Networking Lab

Utilize fiber optic hardware to connect personal computers to the Internet while developing troubleshooting skills.

by **J.B. Groves** | FOT, Wharton County Junior College, Texas

Stated Learning Outcome:

Install a state-of-the-art fiber optics system and diagnose and repair a networking system and a fiber optic system.

Artifact Name:

Fiber Optic Networking Lab - Connect personal computers with fiber optic ten gigabit network interface cards and fiber switches to the Internet and troubleshoot problems with fiber optic test equipment. Grading rubrics modified 9/27/2017- JB Groves III.

Hardware Needed:

Personal Computers running the Windows 10 operating system that are tested by students and work

Uplink Network switch RJ-45 Gigabit uplink switch and router

Fiber optic D-Link DXS-1210-12SC 10Gbe Fiber Optic Switch with RJ-45 Uplink ports

Fiber Optic 10Gbe Network Interface Cards (two of them):
D-Link DXE-810s

US Critical SFP+ (small form-factor pluggable transceiver) two pairs of them.

SFP-10G-SR-US
10 GBASE – SR – SFP+
850 nm 300M

OC-3 50/125 micron Multimode OFNR fiber optic cables with Mini-LC connectors – two of these.

Fiber optic tool kits

OLTS – Optical Loss Test Set to test NIC to switch fiber cables with two pairs of mating sleeves and certified test cables

OTDR – Optical Time Domain Reflectometer to test long span cables

VFL – Visual Fault Locator to test for cable breaks.

JDSU inspection Video Scope – Inspect end faces of fiber with intelligent geometric software

Consumables: Isopropyl alcohol, Kimwipes

Step 1:

Test PC and note that it boots up with Windows 10 operating system.

Step 2a:

Power down PC and open PC panel exposing expansion slots.

Procure the Fiber NIC and SFP from your instructor. Plug the 10 Gbe SFP module into the NIC (Figure 1).

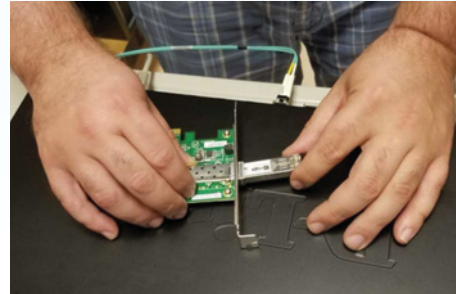

Figure 1.

Step 2b:

Install the D-Link 810-S Ten Gigabit Fiber Optic Network Interface Card into the PC (Figure 2). Put the cover back on the PC (note: power cable to PC is disconnected for installation of Fiber NIC).

Connect the mouse, keyboard and LCD panel and power cables.

Power up PC and boot into Windows. Sign on with Windows log-in.

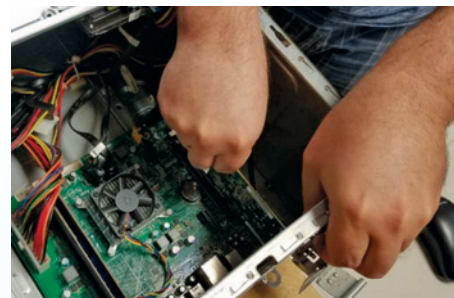

Figure 2.

Step 3:

Verify that the NIC card is recognized by the Windows 10 operating system (Figure 3) and that the correct driver is loaded for the Fiber NIC. Students may use the RJ-45 connection while it is live to obtain the drivers for the fiber NIC.

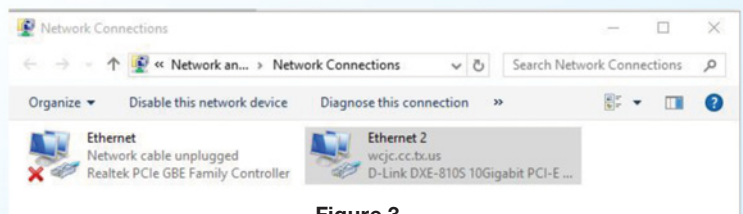

Figure 3.

Step 4:

Clean both ends of the fiber jumper cables Figure 4.

Figure 4.

Step 5:

Connect the clean 50/125 OM3 Mini-LC to Mini-LC fiber cables to the D-Link 810-S fiber NIC in backplane on the PC (Figure 5).

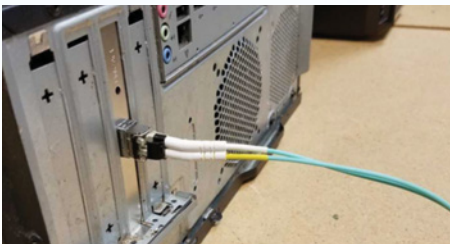

Figure 5.

Step 6:

Connect the D-Link 10Gbe Switch RJ-45 port to the uplink switch (Figure 6).

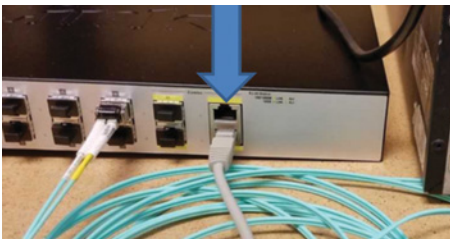

Figure 6.

Step 7:

Verify connectivity to the network and that the Ethernet connection is 10 Gbps (figure 7).

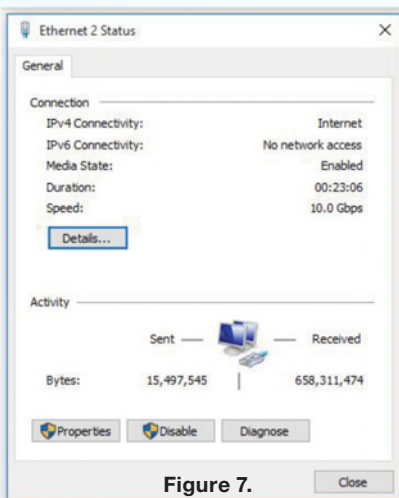

Figure 7.

Step 8

Launch Windows 10 Edge and connect PCs to test network accessing ETA and WCJC (Figure 8).

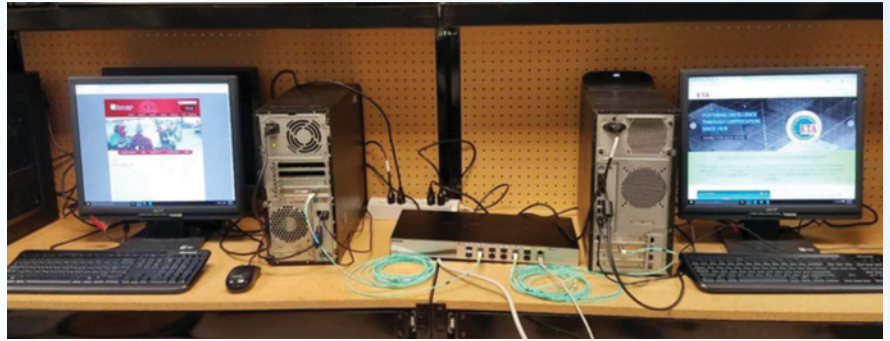

Figure 8.

Grading Rubrics for the Lab(s)

Install a state-of-the art fiber optics system

Fiber optic LAN link—building the LAN and connect to the Internet

Points earned	Failure = 0	Acceptable = 1	Competent = 2	Proficient = 3
Stage one Install NIC and correct SFPs	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt
Stage two Configure NIC within OS	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt
Stage three Connect PC to 10 Gbe SFP/Switch	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt
Stage four Connect 10Gbe switch(s) to Router	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt

Diagnose and repair a networking system and a fiber optic system

Troubleshooting the Fiber optic LAN link—correctly isolate and fix what is broken

Points earned	Failure = 0	Acceptable =1	Competent = 2	Proficient = 3
Stage one Correct NIC install and SFP configuration problems	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt
Stage two Correct connector/cable problems w/OLTS and VFL	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt
Stage three Correct cable connections PC to Switches	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt
Stage four Correct cable problems from switches to router	Unsuccessful with the attempt within three tries.	Succeeds in three attempts	Succeeds in two attempts	Succeeds in one attempt

Where Does ETA Certification Take You?

Daniel Crowder, CETa, works for Moog, Inc. based in Salt Lake City, Utah. He builds, tests and repairs Tactical Air Navigation systems. Crowder stated that he was hired based on his ETA Associate Certified Electronics Technician certification. Here, he's spending the month of September working at Moog in London. Congratulations, Daniel!

Moog, Inc. started as designer and supplier of aircraft and missile components over 50 years ago. Today, Moog's motion control technology enhances performance in a variety of markets and applications, from commercial aircraft cockpits, to power-generation turbines, to Formula One racing, to medical infusion systems

Help ETA spread the word about the many exciting and lucrative careers available in the electronics industry!

Your photos and job experiences will show the next generation that electronics can take you places most people only dream about. As a professional trade association, it is our duty to educate the public that there are many lucrative job openings just waiting to be filled by qualified technicians. With your help, ETA can raise the visibility of certified electronics technicians and show the world all of the varied job titles that make up this exciting industry.

You could win a free ETA stainless steel travel mug!

Just send ETA your on-the-job photo, your job title and a brief description of your job and how ETA certification has helped further your career. Thanks!
