178 C Boiler Temp

120 C Temp at Gun

230 Volt 3 Phase

CARS

Steam is a superior method for cleaning a car's exterior and interior. Optima Steam is the first commercial grade steamer that is specifically designed for cleaning cars and comes with specialist tools to ensure a high-end finish. It takes less time than a conventional clean with better results.

The steam is generated at a constantly high temperature and pressure that is powerful enough to remove dirt but gentle on surfaces. It eliminates the need for pre-soaking or intensive scrubbing and penetrates into small spaces and fittings that traditional water systems cannot. The steam can sterilise a car's interior, killing bacteria, germs and other nasties as well as effortlessly removing stains from upholstery and caked on mud and bird droppings.

- **Car detailing at its finest**
- **Cost-effective option for car grooming services**
- **Team-cleaning delivers a high-end finish**
- **Meets the strict environmental standards**

MAIN ADVANTAGES

- No chemicals
- Sanitises surfaces – killing bacteria, mould, and viruses
- Deep clean that removes grease and dirt from hard surfaces and stains from delicate fabrics

- Easy to use with minimal effort – no more pre-soaking or intensive scrubbing
- Saves water using 95% less than traditional methods
- Generates zero waste water so no costly treatment systems
- Extends the life of materials (e.g. wine barrels last 30% longer)
- Environmentally friendly, meeting council and industry compliance standards

OPTIMA STEAM ELECTRIC AND DIESEL

The Optima Steamer (Diesel and Electric Model) is ideal for mobile cleaning operations such as car washing including paint and panel shops.

This electric model is equipped with a powerful electric boiler that is quiet and energy-efficient. It holds over 40 litres and has an automatic water refilling system that enables a continuous supply of steam so there is no downtime when you're cleaning.

The diesel powered burner produces continuous steam within a few minutes and is heat efficient, reducing emissions, noise and fuel consumption. The boiler's unique stainless steel design supports a long life span and keeps the machine cool during extended use.
