

Green Career Momentum Program – Landing or Creating Your Dream Green Job

Agenda

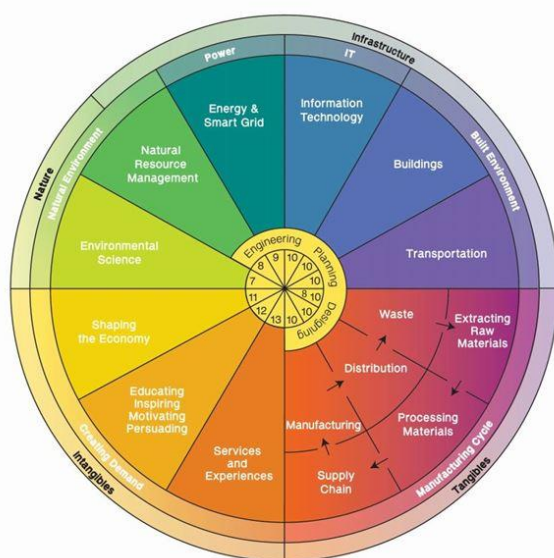

Are you at a crossroads as you consider your next career move in the Green Economy? Have you been inspired by Leaders in Energy members and speakers working in green jobs whom you've met at our events? Is this your year to land the Green Job you've been dreaming about? Are you looking to land, create, pivot into, or move up into your dream green job?

Green Career Momentum (GCM) is an ongoing career development program and job network for those seeking new jobs and related opportunities. The program will feature speakers who are working in the green career arena, career coaches, recruiters, etc. We will also conduct experiential exercises to help people gain insights into their job search and collaborate with one another. The program is tailored to assist job seekers at all levels and provide a supportive environment.

GCM builds on our past Jobs Forums and two Green Career Workshops that we have presented (prior attendance of these is not a requirement for this program). We will be developing a community of job seekers and those seeking related opportunities, e.g., entrepreneurship, in the green space. In addition to learning new tools and strategies, the GCMers will support one another via networking, share information on their job search with others, etc. This process can sometimes be a lonely and isolating one so this will be a good way to build comradery and support for one another.

Participants will also have access to the GCM Portal on Leaders in Energy, with materials from each of the GCM sessions to include recordings of the virtual sessions, worksheets, and other green career resources.

Our sessions will align with four Key Quadrants of the Green Economy below as well as on cross-cutting themes applicable to the green economy. Four key green quadrants are presented below from the Leaders in Energy Green Career Workshop.

NATURE

Environmental Science, Natural Resource Management

INFRASTRUCTURE

IT/Built Environment

Energy & Smart Grid, Information Technology, Buildings, Transportation

MANUFACTURING CYCLE

Extracting Raw Materials, Processing Materials, Supply Chain, Manufacturing, Distribution, Waste
