

THE JACKSON LABORATORY & DEMPSEY CENTER PRESENT:

CANCER GENETICS MANAGEMENT IN THE PRIMARY CARE SETTING

SEPT 22 | 8:00AM - 5:30 PM

WITH SPECIAL PRESENTERS:

Susan Miesfeldt, MD & Gregory Feero, MD, PhD

This FREE program will help you use family history information to identify patients who might benefit from increased cancer screening, genetic testing, and/or referral to a genetics specialist. The program features:

- 1) An educational workshop for primary care physicians, advanced practice nurses, and physician assistants
- 2) Monthly digital educational opportunities to reinforce and build on skills learned during the workshop
- 3) Access to online and mobile resources to help you implement these new skills into your practice

LEARN ABOUT AND PRACTICE

- How genomic tests and research discoveries are impacting patient care
- Collecting a family history with sufficient detail to be useful in identifying patients at risk for cancer
- Analyzing a family history to identify patients at increased or high risk of cancer
- Communicating the benefits and limitations of genetic testing to patients
- Discussing genetic testing results with patients
- Applying evidence-based guidelines for clinical management decision making

29 LOWELL ST. 5TH FLOOR | LEWISTON, ME
