What? In science, we're always trying to understand things that are too small or too big to comprehend, from tiny cells to our entire universe. How do we explain these things? By comparing them to things we understand. Learn how to transform science into poetry, and discover a technique to make science concepts stick for a lifetime.

This workshop combines a deep knowledge of the arts and curriculum with a creative and intuitive teaching style, based on state and national standards. Mimi's arts-integrated approach is designed to help you reach all learners.
