

All Natural Lawn Grub Control (granular)

What is All Natural Lawn Grub Control?

It is a naturally-occurring process plant material, used to make an organic granular product for grub control.

How does it work?

It controls grubs by contact and acts as a repellent. Grubs simply don't like to be around the material so they come to the surface where they can be killed by sunlight, birds, etc.

How do I use All Natural Lawn Grub Control?

It can be applied anytime during the growing season, but it's best to apply before grubs cause excessive damage. Apply at the rate of 3½ lbs per 1000 sq ft. It can be applied directly out of the bottle or used in a drop or rotary spreader. Moisture in the form of rain or irrigation is then required to move it into the root zone. Do not mow the grass until it has been watered in.

What insects are controlled or repelled?

Surface-feeding insects such as cutworms, armyworms, pillbugs, sod webworms, and root-feeding insects such as white grubs, Japanese beetles, European crane flies, and mole crickets.

Is All Natural Lawn Grub Control safe around pets & Wildlife?

It is made from 100% naturally-occurring ingredients, so there should not be a problem.

What size is All Natural Lawn Grub Control Available in?

Currently, it is only available in a 7 lb jug that will cover 2000 sq ft.
