6:30 PM to 8:30 PM

Hebrew Educational
Society

9502 Seaview Avenue
Brooklyn, NY 11236

Join the Science and Resilience Institute at Jamaica Bay and its partners for

CLIMATE FORUM SERIES

RIISING ABOVE THE FLOOD

What are the different types of flooding?

What are the risks of floods?

What can communities do in an emergency?

What can communities do to adapt?

Each year, more deaths occur due to flooding than from any other severe weather related hazard. People underestimate the force and power of water. Communities throughout New York City are prone to flooding, and in recent years, flooding has occurred more frequently, affecting a broader range of communities than ever.

Learn about different types of flooding and its causes, what New York City is doing, and how you can prepare yourself in case of a flood.

Please register for this FREE event at: https://climateforums_floods.eventbrite.com

Participating Organizations: Consortium for Climate Risk in the Urban Northeast • Stevens Institute of Technology • NYC Office of Emergency Management • NYC Department of City Planning • Center for New York City Neighborhoods • and more!

Light refreshments will be available.
