

## Information that is required to be recorded on the Station Log

- a)** Proper reception, relay and/or origination of all required local/national EAS test and alerts.
  - 1. Station should receive and log a Required Weekly Test (RWT) each week from both required monitor sources.
  - 2. Station should originate a Required Weekly Test (RWT) each week.
  - 3. Station should receive and relay the Required Monthly Test (RMT)
  - 4. Station should receive and log a Required Weekly Test (RWT) from IPAWS at least once a week.
  - 5. Entry into log of any malfunction or removed from service for repairs, include date and time of removal and restoration of service.
- b)** Proper operation of the all tower lights and notes concerning any outage.
  - 1. Station should observe the proper operation of the tower lights once every 24 hours either visually or electronically, unless an automatic monitor system is installed to alert personnel of a tower light failure.
  - 2. Entry in log should be made of any malfunction and any FAA NOTAM that was issued. Include date and time of malfunction and correction.
- c)** Information concerning any interruption of broadcast service.
  - 1. Station should log all interruptions of station operation regardless of the reason for failure.
  - 2. Station should log any out-of-tolerance conditions of transmission equipment and corrective action taken.
