

When you think of energy saving tips for your home, do you worry how much time and money it will take to accomplish them?

Here are a few energy saving tips that are quick, easy, and very affordable to do **RIGHT NOW**. Saving energy saves you money (and helps save our planet!).

1. Insulation keeps your house warm in the winter and cool in the summer. It can reduce your cooling and heating costs by 20%. A roll of insulation costs about \$15.
2. Weather Stripping. Air that escapes through windows and doors accounts for about 30% of heating and cooling loss. Weather stripping costs about \$5 a box.
3. Programmable Thermostats when used correctly can save you up to \$150 per year, according to Energy Star. They're also more accurate than regular thermostats.
4. Low Flow Faucets and Shower Heads. These are inexpensive and can reduce your water consumption as much as 50%.
5. Tankless Water Heaters. Save 20% off your water bill. These units never run out of hot water and last about 10 years longer than traditional water tanks. **BONUS**-there's a Federal Tax Rebate when your install these units as per Energy Star.
