

Spring Home Improvement Projects

Spring is finally here! The best time to work on those home improvement plans you've been thinking about for the past couple of months. The following projects are perfect for a Spring home makeover and can also add resale value to your house.

Repairing the Roof: Winter takes a toll on Long Island roofs. Your home's roof may have suffered damage such as moisture seeping in between the cracks and creases. Curling, peeling and even disintegration of the shingles can occur if the roof is not inspected and repaired.

Update the Siding: All winter long you were inside keeping warm, while outside your house's exterior was enduring the winter's harsh temperatures and intense weather conditions. Have your siding inspected and consider replacement with today's great looking, high performance, energy efficient vinyl siding options.

Kitchen Remodeling: Homeowners' magazines this year are talking about sprucing up the kitchen cabinets as a spring home improvement project. Replace the knobs on the doors of the cabinets and add molding to give your cabinets a new look at a low cost. If you are ready for a full kitchen makeover, Responsible Remodeling can handle new cabinets, a center island, and all the details that make your kitchen the centerpiece of your home.

Install Skylights: Skylights can dramatically increase the amount of light in your home, creating an open, sunny feeling in your favorite living space.

Update your Rain Gutters: Without rain gutters, our homes are defenseless against the raging rain storms. The water from rain could erode the soil around the foundation, splash dirt onto the siding of the house and leak into the basement causing internal damage to the house.

Build a Deck: Decks allow you to fully enjoy the sun and serve as a great place for socializing and dining. Decks come in all sizes and can be built in a short time with pressure treated wood that withstands everything the crazy Long Island weather can throw at it.

Add a Hot Tub: Hot tubs are calming after a long day and provide a fun social setting and major health benefits. You choose the hot tub from your favorite dealer—we'll build a custom deck around it and create an oasis in your own backyard.

Install an Enclosed Porch or Florida Room: You don't have to live in Florida to enjoy an enclosed porch addition. Create a three or four season living space with energy efficient windows that make full use of the sun and create a window on the outside world. Responsible Remodeling will help you plan your porch addition and execute the project to the highest standards in the industry. Bring the Sunshine State to your New York home with a Florida room this Spring.

Have Your Air Conditioner Inspected: Summer follows Spring and we're going to need our air conditioners more than ever. It's a good idea to have your central air conditioning system inspected before it starts to get hot. Your air conditioner not only keeps your home cool during the hot summer months, it also dehumidifies your house and keeps mold from developing inside the walls.
