

RESPIRABLE CRYSTALLINE SILICA TRAINING

A Review of OSHA's New Standard for Construction

Free Construction Respirable Crystalline Silica Standard Training

This training is for construction industry including but not limited to workers, site superintendents, safety managers and employers who have not received OSHA New Silica Standard training.

OSHA approved training materials developed under an OSHA Susan Harwood training grant.

In two languages (English and Spanish) and designed for the construction industry.

Trainees who participate in and complete the whole training receive a certificate.

We are currently recruiting trainees. If you are interested, please contact one of the training coordinators below.

OSHA requires employers to be in compliance with the new standard by no later than June 23, 2017
