

SmartDeterrent™
THE FIRST LINE OF DEFENSE

For Security, Deterrence is Your First Line of Defense.

SmartDeterrent™ is a Patented Microprocessor Technology That Can be Mounted on Any Perimeter Glass Surface of a Home or Business to Help Deter Intruders Before an Intrusion.

Through its sensor like design, on-board high intensity warning LEDs sequentially go from a blinking red light to an “Armed” word message capsule that glows in Police Blue. In other words, SmartDeterrent™ is critically important to help deter the criminal element.

- *Long life battery operation*
- *Low battery warning*
- *Operates in constant or night modes.*

FEATURES

- First of its kind microprocessor based electronic visual deterrent and warning device which can operate in constant or night mode.
- High intensity LEDs that sequentially switch from the units blinking Red LED to its illuminated "ARMED" Police Blue message word capsule.
- Customization of the microprocessor can be programmed to change the blink rate and light intensity.*
- Equipped with long-life battery and low battery LED light indication on the rear of the unit.

SmartDeterrent™ Circuit Board

SmartDeterrent™ contains advanced microprocessor based technology.

Older technology burglar alarm systems provided many overt ways that an intruder could actually see, be deterred, and be warned that the home or business was electronically protected by a burglar alarm system. Often times the intruder could see long before they even reached the premises, if the alarm system was armed or disarmed from the outside of the home. With the advent of today's technology, many alarm systems rely more on motion detectors, than on electronically protecting all of the perimeter doors and windows. That being said SmartDeterrent™ fills this void, as window decals and yard signs are so commonplace and ubiquitous, that they have become essentially invisible compared to SmartDeterrent™, that by design makes it appear through its sensor type circular shape and mounting on the glass itself, that the home or business is electronically protected. The units high intensity and specially positioned LEDs, automatically and sequentially switch from the units RED WARNING LED, to its "ARMED" multi-LED word message capsule, that brightly glows in POLICE BLUE; making it abundantly obvious that the home is electronically protected by an alarm system, and SmartDeterrent™ can even be seen upon walking up to the home or business. Furthermore, even if the burglar alarm system at the premises is disarmed, SmartDeterrent™ can be set to be constantly on, or it can be set to be in night only mode, which uses SmartDeterrent™'s on board photo-transistor light sensor technology.
