Success?

Continued from Page 1A... the other way.

One way that schools are related to problem solving is through the institution of a different kind of schooling environment. This can be more favorable for urban school districts than in urban areas.

But community leaders and some public officials are concerned about the role of neighborhood schools in community. They believe that the racial disparity in achievement has increased in recent years.

The racial disparity in achievement has been shown to persist in many school districts. The problem is not unique to schools in urban areas but is also prevalent in suburban areas.

In Madison, the disparity in achievement between black and white students is significant. The average black student in Madison has a lower GPA than the average white student.

In the 1993-94 school year, the average black student in Madison had a GPA of 3.0, while the average white student had a GPA of 3.5. This disparity is evident in other school districts as well.

In the 10th grade tests, black students in Madison scored lower in reading, writing, and mathematics than white students. In the 11th grade tests, the disparity was even more pronounced.
