

The eAuditing Fundamentals instructors, J.P. Russell and Shauna Wilson, have well over 20-years' experience conducting eAudits and using virtual communication technologies.

eAuditing techniques are more efficient in some situations. In other scenarios, not so much. They potentially may even lead to questionable audit report conclusions. Pros and cons of conducting eAudits and their consequences are reviewed in this class.

In this class, proven techniques are provided for conducting eAudits. eAuditing practices are explored to help organizations make informed decisions regarding their use. The class includes a ten-point eAudit program implementation checklist.

The student will learn the correct techniques to conduct eAudits; the needed skills; how the organization can benefit; the risks involved; and how to implement an eAuditing program.

Bottom line: Controlling auditing costs and managing both internal and external supplier networks requires learning and using the technology available to us. This class is intended for: 1) auditors who want to learn about remote techniques and the problems to avoid; 2) for those interested in managing, implementing, or conducting eAudits; and/or 3) as continuing education for self-improvement. The class consists of a series of lessons, illustrations, diagrams, interactive exercises, and quizzes.

Please note: The eAuditing Fundamentals: Virtual Communication and Remote Auditing class is not about how to conduct system or process audits. Instead, it is about virtual communications for teams and remote audits.
