

1218 Electronic Tank Gauge & FuelCloud

The Morrison 1218 Electronic Tank Gauge can now be integrated with FuelCloud's fuel management system platform. This integration allows FuelCloud accounts the ability to collect tank inventory information from any Morrison 1218 tank gauge console with internet service via FuelCloud's web portal. This connectivity option is available free of charge during this introductory launch of the 1218/FuelCloud integration.

With a FuelCloud web portal account only, users will be able to:

- Remote monitor tank inventory from multiple 1218 tank gauge consoles located at multiple sites connected to internet service.

With the addition of FuelCloud hardware on-site, users will be able to:

- Remote monitor tank inventory from multiple 1218 tank gauge consoles located at multiple sites connected to internet service
- Manage access and track on-site pump transactions
- Manage and self-reconcile fuel inventory
- Automatically file state and federal fuel tax refund forms
- Run unlimited custom reports

How the 1218 Electronic Tank Gauge works with the FuelCloud integration:

- Each registered 1218 tank gauge console will automatically send tank level information to the FuelCloud web portal at the conclusion of every tank filling event and will periodically send tank level information once every hour if no filling event has occurred.
- It should be noted that all tank alarm indications should still be monitored and maintained at the 1218 console level.

The 1218 Electronic Tank Gauge console firmware now contains the pre-programmed FuelCloud license on all new systems. To update any existing 1218 systems to firmware version 3.5.0, download the new firmware from our website. Refer to our **1218C Firmware Upgrade Instructions** for step-by-step instructions. **Morrison Bros./FuelCloud Activation Instructions** are also available for assisting with the integration process.

For information regarding Morrison's 1218 Electronic Tank Gauge and/or accessories, please contact our customer service department at 800-553-4840 or via email at custserv@morbro.com.

For more information on FuelCloud's fuel management system platform, please contact The FuelCloud Team directly at FuelCloud.com; info@fuelcloud.com; or 844-792-6071.
