

Christine L. Peterson, CPP, ISP is the President at Protus3 and has over twenty-seven years' experience in the security field and over thirty years in business administration. She is board certified as a Certified Protection Professional by ASIS International and as an Industrial Security Professional by the National Classification Management Society. As a security consultant she has worked with institutions and businesses to develop the appropriate level of security controls to support their operation and prosper. She believes that security creates the framework that supports a business's stability and prosperity. As an executive and security professional she is actively engaged in the community having served on boards and other leadership roles with ASIS International, NCMS, the Greater Raleigh Chamber of Commerce, the RTP CFO Forum, and Triangle Family Services.

Protus3 is one of the few – if not the only – security firms that offers security consulting, security system design, and investigative services. Since 1988, they have worked with companies and agencies throughout the US and in several foreign countries.

The staff at Protus3 is comprised of individuals with a total of over 450 years of security experience. This foundation includes formal training in security related fields, experience in the construction industry, hands-on experience both as security providers and as security managers, thousands of unique security evaluations, and extensive experience in security consulting for a variety of projects and a number of different companies. Protus3's combined expertise is augmented by staff members with experience in security guard management, electronic security system design and management, security hardware, security-related training, military and police counterintelligence, tactical and counter-terrorism operations, and state and local law enforcement and security-manpower administration.

Protus3 neither represents nor endorses any specific line or brand of security equipment or service. Instead, we work to develop security controls that are appropriate, scalable, meet industry compliance requirements, and support our clients' economic advantage.
