

## **WELSH CONSTRUCTION SELECTED BY TELLUS BUILDING SYSTEMS**

"Welsh Construction, a rapidly growing commercial general contractor based in Melbourne, recently became an authorized builder for the Tellus Building Systems. Tellus designs, engineers and manufactures advanced, high performance, lightweight, concrete composite building superstructures. On commercial and multi-family projects, thin, lightweight concrete wall panels attached to steel framing are produced off site, trucked in pre- assembled and can be erected by cranes in less time and cost compared to the traditional manual process. Commercial buildings can now be wind rated to 250 mph plus. "We look forward to using this system on new buildings throughout Brevard County and the southeastern states." said Ken Welsh, President/CEO.

Welsh Construction was formed by Ken Welsh in 2003 and provides design/build and all commercial construction services in the following sectors: office, medical, self- storage, retail, industrial, multi-family, churches and education.
