Product Lifecycle Management

Product Lifecycle Management is about improving the efficiency of a product's life from inception to deployment to maintenance. Learn the latest concepts, principles, strategies, practices and applications of PLM. The course will place particular emphasis on initiating PLM projects at the beginning of the lifecycle in engineering and manufacturing and its impact on the rest of the organization.

- **Learn more about management skills that improve the efficiency of your product.**

Introduction to C# Programming

Participants will develop an understanding of programming fundamentals including input/output operations, decision-making and looping using Visual C#, the in-demand language that incorporates the best features of several different programming languages. The course explores the benefits of object-oriented programming with vivid, real-life examples.

- **Learn more about developing dynamic skills that set you apart from the competition.**
-

Database Management

Building Gateways for User Interaction with Data

Introduction to PHP and MySQL - Learn how to create an interactive Website, allowing visitors to post and retrieve information provided by you or your site's visitors. In this six-week online course, you'll see how to create dynamic Web pages using the PHP programming language and the MySQL database server.
