

WOODBURN

Transportation System Plan Update

This plan will guide the City's transportation network over the next 20 years. It considers sidewalks, roads, trails and rail that will be used by pedestrians, bicycles, cars, trucks, buses and trains.

The plan guides how we develop our transportation system to meet the current and future needs of Woodburn. It helps determine which projects, policies and programs receive funding. We want to hear from you about what's needed!

Why Update the Plan?

The City's existing Transportation System Plan was adopted in 2005. It needs to be updated to reflect the transportation needs of our community today and into the future. In 2016, 619 acres were added to Woodburn's Urban Growth Boundary (UGB). It will be important for the updated plan to consider our expanding community and changing transportation patterns.

This project is an opportunity for the City to work with the community to better understand how people use the current system. We want to make sure it incorporates your needs and desires, resulting in a transportation system that works for everyone.

What will the updated plan do?

- Adopt an updated TSP that provides a safe, efficient, and well-connected transportation network for all transportation modes (walking, rolling, biking, driving, taking transit) based on existing and planned land uses.
- Identify transportation projects, policies and programs that will accommodate Woodburn's population over the next 20 years, including opportunities to provide transportation facilities and services to the expanded Urban Growth Boundary areas and new urban reserve areas.
- Build on existing adopted plans and planning efforts.
- Update the existing project list to meet current and future transportation needs.
- Determine funding opportunities for new and future transportation projects.
- Identify strategies to create safe environments for children walking and biking to school, such as the Oregon Safe Routes to School Program.

This planning effort will address transportation-related issues for residents and visitors to support future growth and development.

Anticipated Project Schedule

Community Advisory Committee Meetings

Open House

2017	2018
