**Letter from Judith Mullens, Continued…**

Teachers plan new lessons on conservation and sustainability with our Perot partner for T1 students’ very first parent-child field study day with Mountain View College’s Sustainability Project. Our Early Childhood science program is rich with meaning. Students learn how to cherish what is theirs and preserve it for the next generation by learning how to identify and harvest the seeds of native plants as well as learning about the importance of water conservation.

Fall is also a time for parents to come and “play” together with their children at school. After the fall conferences, please plan on joining us for the Halloween traditional parade around the Ring Road, and picnic. It is pure magic! Pack a picnic basket and bring a blanket for you and your little princess or Star Wars character. In November, we invite Pre-K parents to return and plant a pansy with their son or daughter, and to play math games with their kindergartner. We hope you are able to join us!

Warmly,

Judith Mullens
