

Dade Moeller®

An NIVIS Company

NFPA 70, National Electrical Code Three-Day Essentials

This three-day session is presented by nationally-recognized experts that are active in the code-making process. The instructors, with their unique insight into the intent of the rules, will lead the participants through discussion and related group exercises that will enable use and better understanding of the entire code, with particular emphasis on the most used chapters. The course will benefit anyone that uses or enforces the code, including: engineers, designers, electricians, contractors, safety professionals, inspectors, and others. Unveil the mysteries of sizing conductors, raceways, and overcurrent devices. Learn the purpose and proper method of grounding electrical systems and equipment. See what has changed with the chosen subject matter in this latest edition of the NEC.

START	END	LOCATION
Mon., Oct. 24	Wed., Oct. 26	Richland, WA
Wed., Nov. 30	Fri., Dec. 2	Las Vegas, NV

Dade Moeller can customize a course for your company's needs. Whether it involves on-site training at your facility, custom dates or anything else, contact us today! academyregistrar@dademoeller.com 1-800-871-7930

Dade Moeller Training Academy has long been recognized as one of the foremost providers of education and training on a complete range of radiological and occupational safety topics. Our faculty are recognized subject matter experts who are training professionals with expertise in radiation safety, occupational safety, industrial hygiene, risk communication, transportation, instrumentation, and emergency preparedness and response. When they are not teaching in the classroom, our faculty members are working on high-level projects with government and commercial clients.

NFPA 70, National Electrical Code[®]: Is Your Facility in Compliance?

Did you know that the National Fire Protection Association has released a new 2017 edition of its National Electrical Code[®] (NEC)?

The most widely used technical document in the world, the NEC[®] helps protect people and property from hazards associated with electrical energy by providing safe installation practices for electrical equipment and systems. The 2017 edition includes five new articles and several new and clarified rules that your Safety & Health Department will need to be aware of. For example, there are new rules covering reconditioned electrical equipment, meeting spaces, and emergency response personnel protection.

To help your organization get up-to-date on the new NEC[®], we invited 35-year electrical industry veteran Bobby Gray to share some insight on these changes for the Dade Moeller/NV5 community. Bobby is a principal member of several NFPA electrical standard technical committees and works with Dade Moeller/NV5 to bring joint safety solutions to our clients.

To read Bobby Gray's article, go to dademoeller.com and click "Blog" at the top of the page.

NFPA 70E, Electrical Safety in the Workplace Two-Day Essentials

Learn to use the best information available to protect workers from electrical hazards. See why OSHA considers NFPA 70E the industry's best prescriptive methods to achieve a workplace that achieves the performance expectation of a safe location for all employees.
