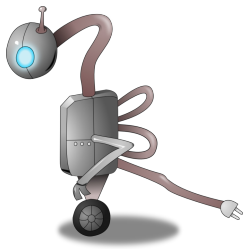
# Youth Digital Arts

www.YDACS.com

## Innovation, Inspiration, Aspiration



Students from 3rd grade through high school love the digital arts: Drawing, Painting, Photo Painting, Storytelling, Comics, Cartoons, Movies, Manga, Anime, Animation, Graphic Novels, Storyboarding, and Video Games.

Our online, self-paced courses allow students to explore the digital arts from the basics, with no experience required, to highly advanced professional digital art that pushes the boundaries of digital art software. You can view amazing student digital art in our Blog and read hundreds of testimonials from Moms, students, and teachers.

Youth Digital Arts classes are grouped into three tracks. Courses build upon one another, reinforcing skills taught in the preceding courses and teaching additional advanced skills. Art forms are also integrated across the tracks.

Each course is entirely online, available 24 hours/day, fully supported, and completes with a student digital art portfolio of class works and a student activity report. Each course is 60 days long and costs $155. Our High School Visual Arts course is twice the length and price. The software taught is professional level and FREE to install on as many computers as you wish and updates are free. DA101 is the only course with a small fee for the software. Please download and print our Spring 2017 Course Catalog for all information regarding our courses and programs.

We hold monthly Cyber Jams where students demonstrate their projects and skills and we offer Cyber Studios where advanced students work on open-ended projects.

We also offer our free Student National Mentorship and Student National Fellowship program.
