

Dear Clients:

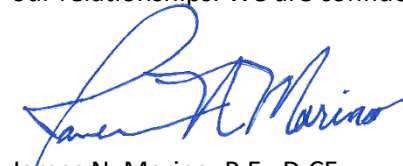

I am pleased to announce Taylor Engineering's acquisition of Interflow Engineering, LLC, effective July 17, 2017. Our integrated firm will operate as Taylor Engineering, Inc.

Taylor Engineering began its professional practice in 1983. Our growth since then stems from our delivery of leading edge engineering services and the respect and referrals we have earned from our clients and professional peers. We have attracted high-quality, committed professionals to our firm and have invested in their training, development, and professional growth. Our success has in no small way directly contributed to our clients' success in their public service and business pursuits. With the acquisition and integration of Interflow into our organization, we expand our professional capabilities and the range of services we can provide our clients.

Interflow has a strong competency in integrated groundwater/surface water modeling, stormwater master planning and design, pollutant load modeling, water supply planning, watershed management, and other disciplines. These skills strengthen and expand Taylor Engineering's current portfolio of capabilities. Our larger, integrated organization will allow us to serve you with a wider array of services and greater depth of staff.

If you have any questions about this exciting news and what it will mean for you, please contact any of us at any time. We look forward to introducing you to our new team members.

We are grateful to you not only for giving us the opportunity to provide leading-edge solutions to your challenges in the water environment, but also for your loyalty and friendship which have enriched our relationships. We are confident that our new affiliation will serve us all well.

James N. Marino, P.E., D.CE
President
