

greenlight™

Safer driving starts here

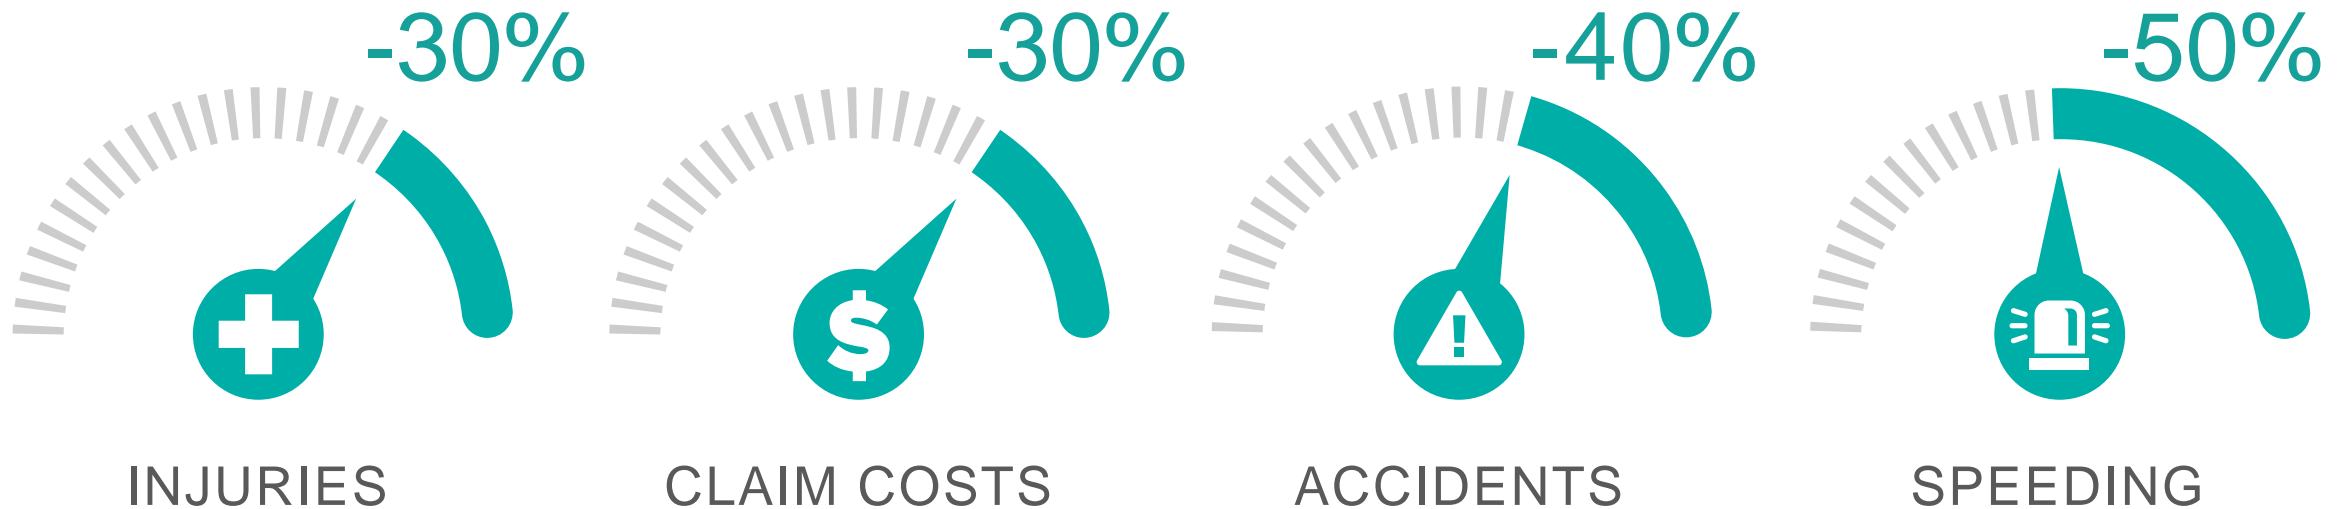

The future of fleet video and telematics is in your hand.

Why use video and telematics?

Fleets leveraging Greenlight can see massive reductions in risk and its associated costs. Transit studies have shown the following effectiveness for video and telematics implementations.

Source: *Journal of Public Transportation*.

Save money. Improve safety.

The Greenlight SmartCradle™ system enables your mobile device for video and telematics data.

- Most affordable way to add video and telematics to fleet vehicles
- Only mobile solution backed by insurers

Shift safety into high gear.

Video can have a significant impact on driver habits, and claims costs. Greenlight's video system has features that are both robust and simple

Quick-launch

Quick-launch is a key time saving feature that makes Greenlight simple and quick to use every time you drive. All you need to do is dock, swipe, and Greenlight starts running.

Video Loop Recording

Loop recording works by letting the phone record short segments of video and automatically erasing the segments where nothing happened. This provides full video coverage of all drives with a minimal use of space.

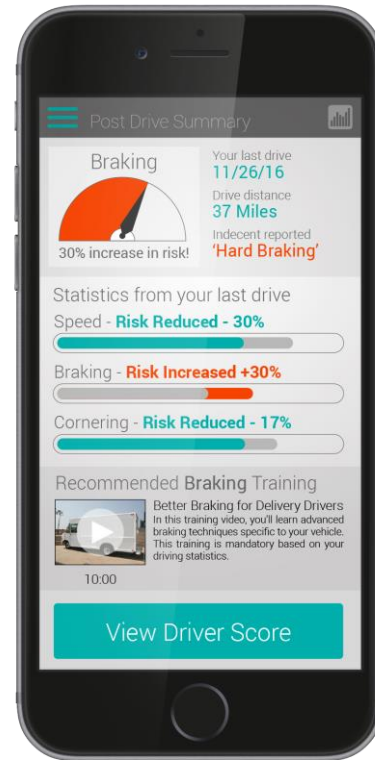

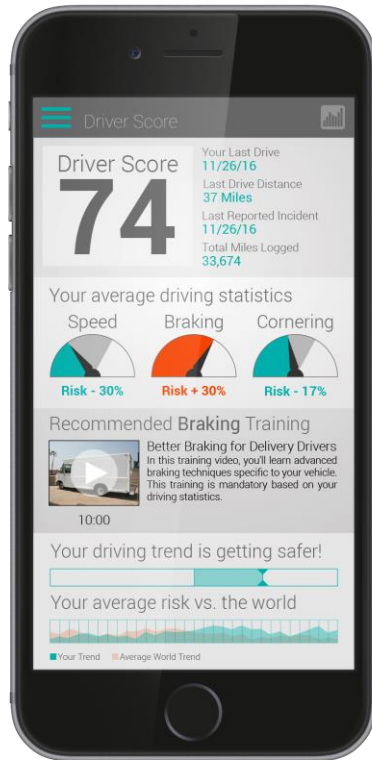

Incident Detection

Special algorithms allow Greenlight to understand when an incident may have occurred. In the event of a sudden impact, Greenlight will detect the incident and immediately store your video. Evidence is secured by Greenlight, automatically.

Driver scoring benefits all.

We collect secure, anonymous data, to help drivers understand how they compare to their peers and to provide actionable insights that lower risk.

Track

- Driver performance tracking
- Profiling for cornering, braking, and speed
- Trending data

Improve

- Driver performance comparison
- Targeted areas for driving improvement
- Video training

Designed to keep you connected.

Greenlight's SmartCradle was designed to keep your phone secure, charged, and out of your hands.

SmartCradle

Charges your phone

Holds phones up to 3.5" wide

Compatible with most Android and iOS devices

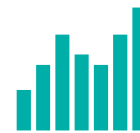

BLE Button

Connects to your device via BT

Tap to capture events

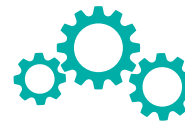

Tri-color status LEDs

Your fleet at a glance.

Knowledge

- Overall fleet score
- Driver trending data
- Performance and training tracking

Convenience

- Claim video access and review
- Automatic feedback activity
- Automatic video driver training

Advantage Greenlight.

Greenlight carries the same discount as its competitors, at a fraction of the cost
