

Solar Gard[®] Metal Shield and Mirror Shield

Protection from Acid Etching

Innovative cost-saving solution to graffiti damage

Overcoming vandalism is an enormous and growing problem in today's society. Any surface accessible to the public is vulnerable and easily vandalised, especially mirrors and stainless steel. Costly replacement is the usual option for removing the handiwork of 'artists' choosing to etch out their tag for the world to see and surface repairs to mirrors and stainless steel surfaces are often impossible to achieve.

Until now.

Solar Gard's revolutionary Metal Shield and Mirror Shield protective films offer the perfect twofold solution by:

- Renewing the defaced surface, refreshing it to show a brand new looking stainless steel or mirror appearance without having to replace or repair the original surface
- Providing a sacrificial protection for the surface it covers; in the event of future marking, the film can easily be removed and replaced

Metal Shield

Mirror Shield

Ideal Applications:

- Mirror Shield as the name suggests is a film with a reflective full mirror finish.
- Metal Shield's stainless steel grain finish provides a perfect 'veneer' to renew damaged stainless steel surfaces

Restrooms, elevators, escalators, vending and ticket machines, fuel pumps, displays, public transport, public buildings, hospitals, hotels and restaurants are all typical applications that would enjoy the restorative and protective features of the films.

Features	Benefits
Metal Shield and Mirror Shield are opaque	Masks the imperfection, whether caused by spontaneous ageing or vandalism
Distinctive Stainless Steel grain / Mirror look	Provides the original appearance of stainless steel / mirror finish
Removable adhesive	Can easily be removed and replaced, providing a continuous original appearance
Easy and fast installation and replacement	Impressive savings compared to replacing the damaged area (including cost of part, cost of replacement, opportunity costs, eg down time)
Polyester material	High durability, strength and masking ability to cover existing damage without needing to repair surfaces first
Limited total cost of installation / film	Outweighs 'doing nothing' and leaving the damaged / vandalised part 'as-is'
Can give any smooth surface a mirror or stainless steel look!	A very cost-effective way to upgrade an existing surface to a modern and useful application
