

Millennium Ultra

Update Version 1.0.10.0 Release Notes

Contents:

1. New Features and Enhancements
2. Software Bugs addressed

1. New Features and Enhancements

- Millennium Ultra software integrated with Ving Card locks. Users can now issue VingCard credentials directly from Ultra. This provides a more unified access control experience and a single database in installations with a mix of conventional and VingCard doors.
- Support for multiple Assa Abloy DSR server instances. This improves the scalability and stability of this integration for users with large numbers of wireless locks.
- Floor Lockdown support added. Now operator can send the Lockdown commands to elevator floors
- Active directory integration for operator accounts. If the integration enabled, operator can use his domain credential to login to Ultra simplifying authentication of Ultra operators and improving security.
- Favorite devices page added to the System Administration folder. This feature allows an operator to select a list of favorite devices for more prominent placement and simplified access in the mobile application

2. Software Bugs Addressed

- Import cardholders with leading "0" problem fixed
- Grouped commands bug fixed. Now all Grouped commands executed correctly.
