

Thank you for participating in the KenKen Classroom Program!
There are many ways to use KenKen with your students, including playing interactively online or using larger puzzles for teamwork solving.

THIS WEEK'S *KEN*ertainment

 **KENentertainment™**

Who Let the Dogs Out?

Olivia has **six** dogs to walk.
If she walks **two** at a time, how many different
pairs of dogs can she take out?

Play free games at www.kenken.com

Find the solution at the bottom of the answer key.

For more KenKen of all sizes and difficulty levels, visit www.kenken.com

HOW TO PLAY KENKEN®

1. Fill in each square with a single number. In a 3x3 grid, use the numbers 1 through 3. In a 4x4 grid, use the numbers 1 through 4. In a 5x5 grid, use the numbers 1 through 5...and so on.
2. Do not repeat numbers in any individual row or column. For example, in a 3x3 grid, each column and each row should be filled in with the numbers 1, 2, and 3, with no duplication.
3. Each heavily outlined set of squares is called a “cage.” The numbers in each cage must combine (in any order) to produce the target number indicated in the top corner by using the mathematical operation next to the target number.
4. A number may be repeated within a cage as long as it is not in the same row or column.

HINTS

1. First fill in single box cages, called “freebies,” with the number in the top left corner.
2. Note the candidates (all possible numbers for each square) for each remaining square and then determine the correct numbers by math, logic, and process of elimination.
3. Each puzzle has one unique solution.

Hello, I'm Lulu, the KenKen Guru.
Did you know the Japanese word,
Kengaeru, means “to think”?

This Week's KENtertainment:

Who Let the Dogs Out?
 There can be 15 different pairs of dogs.
 Let's say the dogs are named A, B, C, D, E, and F.
 The possible pairs are: AB, AC, AD, AE, AF, BC, BD, BE, BF, CD, CE, CF, DE, DF, and EF.
